New day at the robots` factory

ROBORISE-IT!
ROBOTIC EDUCATION

Hello!
Our next task is creating the flying robot that will provide online translation of the sport competitions. It will makes the seeing of the TV translations from the Games much more interesting!

TASK

nerrka@gmail.com

ROBORISE-IT!
ROBOTIC EDUCATION

TASK

- to develop the flying robot for providing the online translation of the competitions

Steps

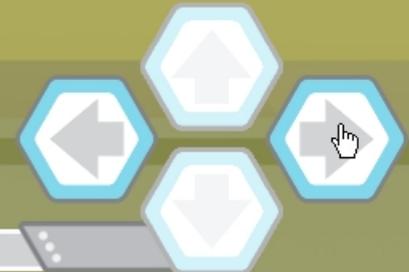

- to know more about the flying robots
- to define the main features of such robots
- to make the choice of the robot's design

0

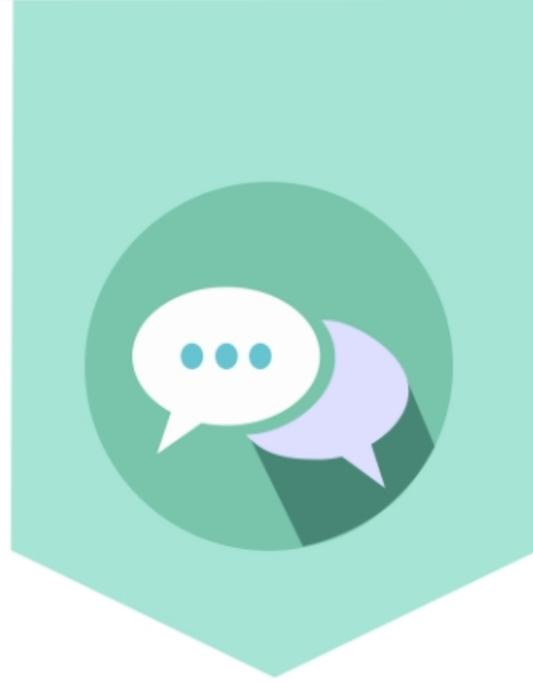

4

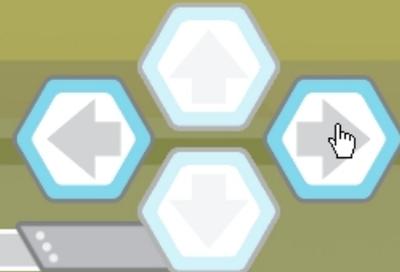

Discussion of the task

What do you know about the flying robots? How they are designed?

nerrka@gmail.com

Flying robots

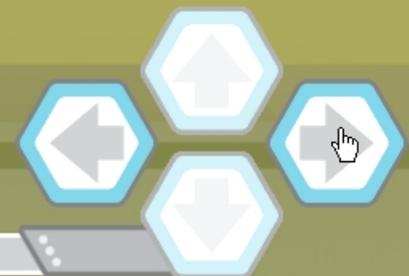

Flying robots may be build on the chassis of the plane, helicopter or quadcopter. Even the balloons are used (for the weather high-altitude balloons).

0

6

Flying robots

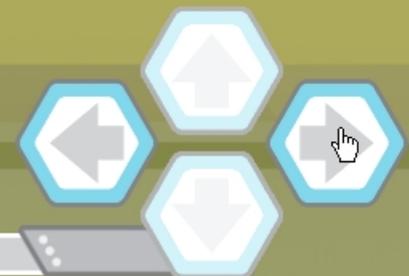

The flying robots may have different designs. It depends on the tasks that must be performed by the robot. Each of them has advantages and disadvantages for different purposes.

0

7

Helicopter drones

The helicopter drones usually not so small due to the complicated mechanics of the transmission and controlling. They may host a lot of load, but has a high fuel consumption.

A set of three hexagonal icons: a yellow starburst with the number '0', a green play button, and a blue hexagon with the number '8'.

A set of four hexagonal directional control buttons (up, down, left, right) and a central button with a hand cursor icon.

Plane drones

The plane drones also has a complicated design, but much more effective. The main disadvantage is impossibility to hang in the air. Also big plane drones usually needs the runway for the landing and take off.

0

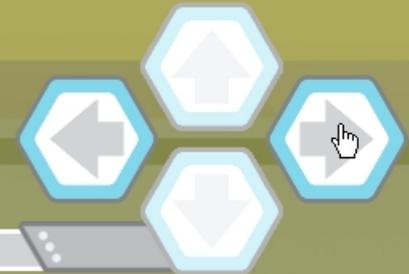

9

The convertible drones

This type of the drones combines the advantages of the first two types. They are effective due to the using the wings for the horizontal flying. And they can to hang in the air and not need the runway. But they very complex and expensive.

ROBORISE-IT!
ROBOTIC EDUCATION

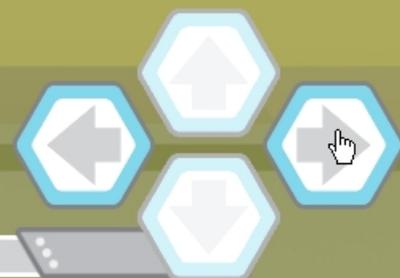

The Convertible drones

ROBORISE-IT!
ROBOTIC EDUCATION

This drone may take off vertically and change the orientation of the wing in the fly! This allow not to use the runway and has all advantages of the plain-body drones.

Question

nerka@gm

Do you ever build the robots that can transform?

0

12

A set of game UI icons including a yellow starburst, a play button, and a number '12'.

A set of game UI navigation icons including four directional arrows (up, down, left, right) and a hand cursor icon.

Quadcopter drones

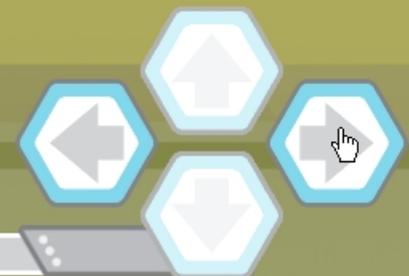

This drones still can't operate a long time, they are noisy, they are slowly than plane-body drones. But they are very easy to use, can hang in the air and has high maneuverability. The simple design and low prices makes such drones very popular.

0

13

Octocopter drones

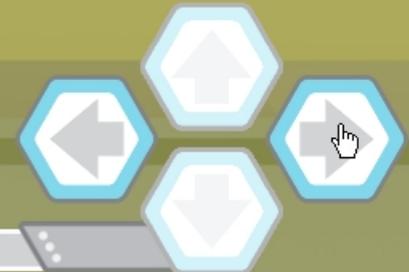

It is a more powerful drones than the quadcopters. It can fly higher, move faster and carry heavier payloads than other drones. The octocopter obtained his name due to using the eight (octa in Greek) rotors. As you may guess the "quad" is a four in Greek.

0

14

Flying taxi

ROBORISE-IT!
ROBOTIC EDUCATION

The unmanned flying taxi is becoming real. Such full-electric multicopter machines make the dreams real!

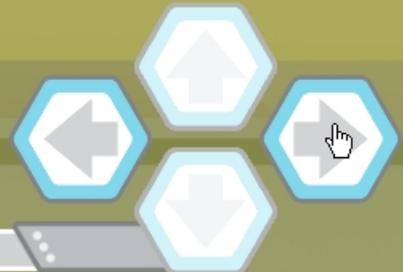

How many propellers this machine has?

0

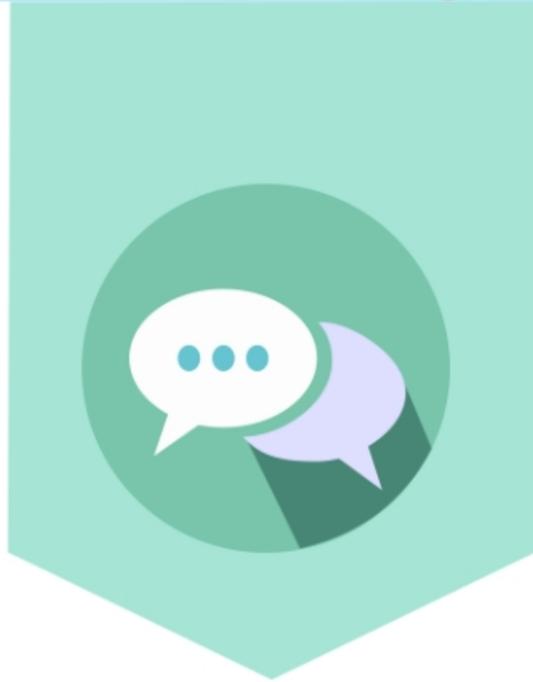

15

Discussion of the task

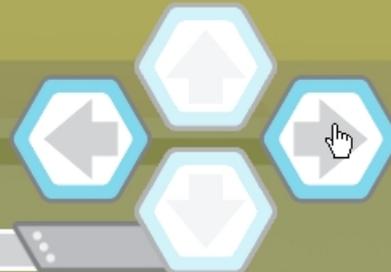

How do you think, what type of the flying robot will be more suitable for using on the sport competition?

0

16

Filming the sports

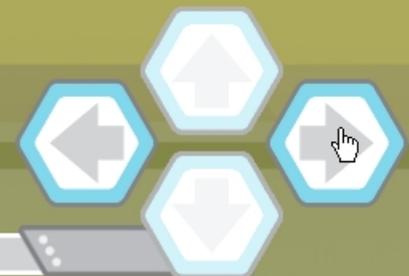

A lot of crew are needed when the huge cameras are used for the filming. Often the helicopters are carry them all. This is gives a great quality of the video, but very expensive. Also helicopter can't be close to the object that is filmed.

0

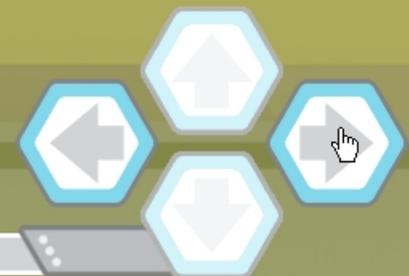

17

Filming the sports

When the quadcopter is used, the only two humans needed. One of them is a pilot, and the cameraman is another. Such approach allows to obtain great videos.

Attention!

Flying a quadcopter is a lot of fun but you must not affect other people!

Remember the rules:

- Fly at or below 120 m (400 ft)
- Keep your drone within sight
- Never fly near other aircraft, especially near airports
- Never fly over groups of people
- Never fly over stadiums or sports events
- Never fly near emergency response efforts such as fires

Quadcopters

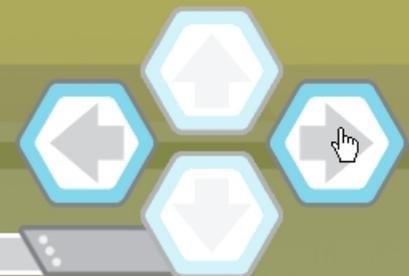

Such drones also may be used for filming the owner due to the tracking all him movements.

0

20

Let's summaries

We must create the flying robot that:

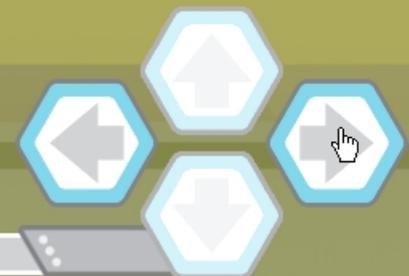

- May be easily used for the filming the sport
- May hang in the air
- Be not expensive

0

21

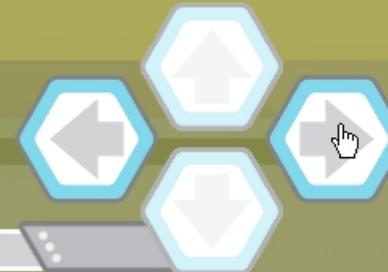

Meet Quadry!

ROBORISE-IT!
ROBOTIC EDUCATION

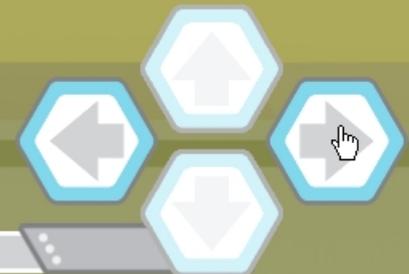

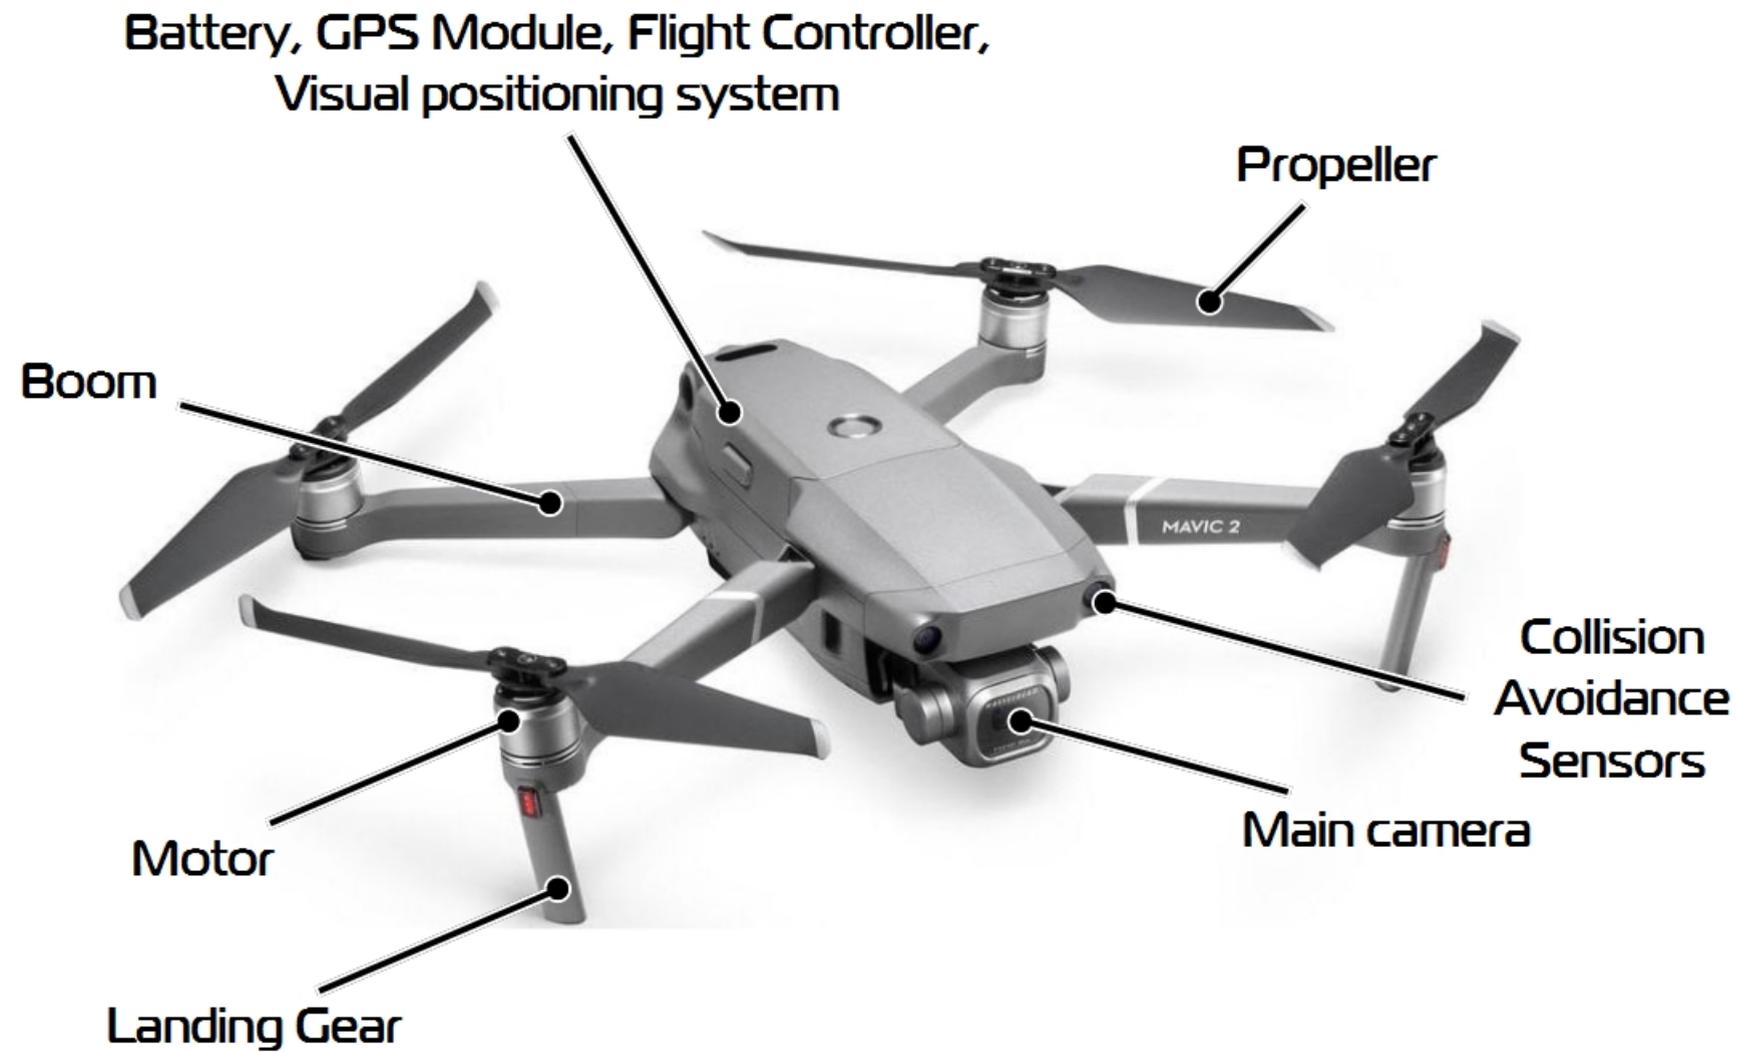

This is the quadcopter drone with stabilised camera.

Quadry

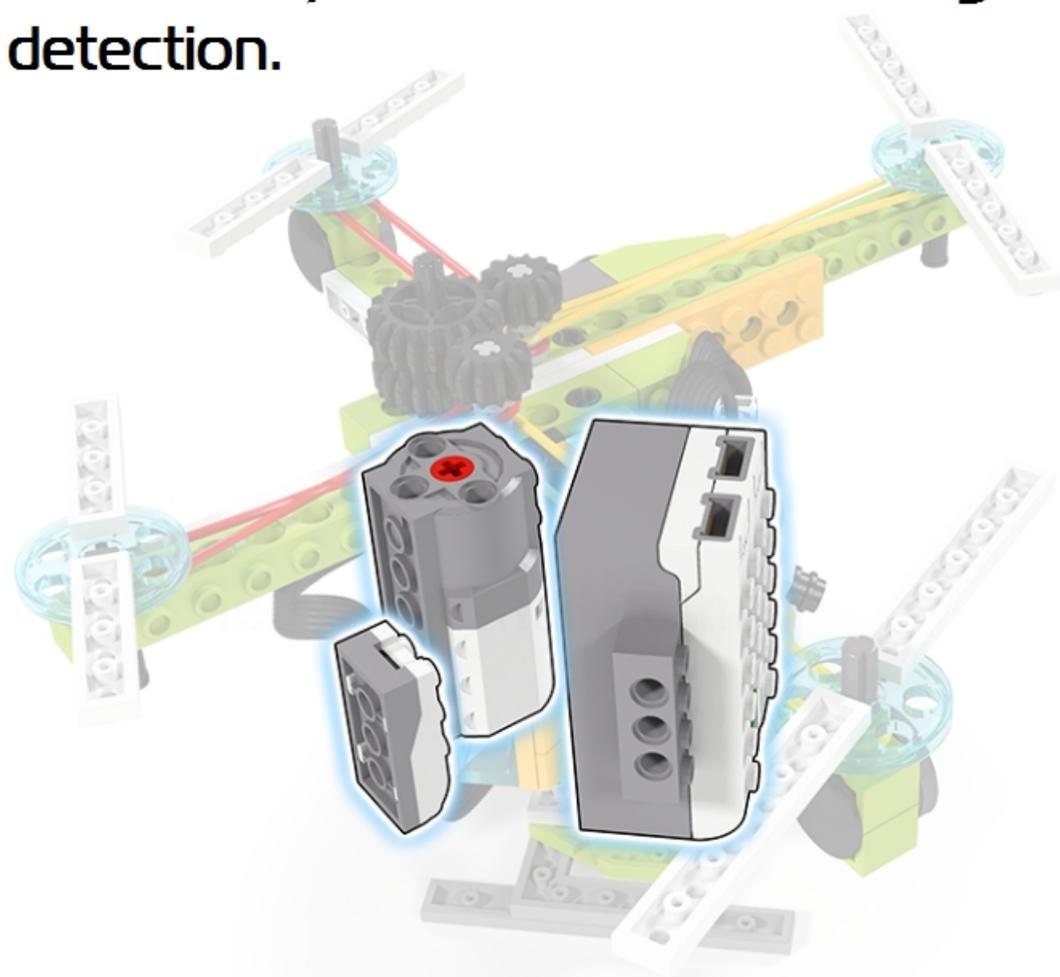

Quadcopter's elements

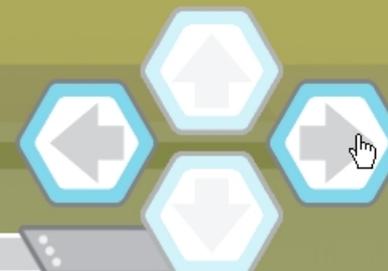

Features

The one motor is used for drive all four propellers. The Motion sensor may be used for maintaining the height and ground detection.

Find:

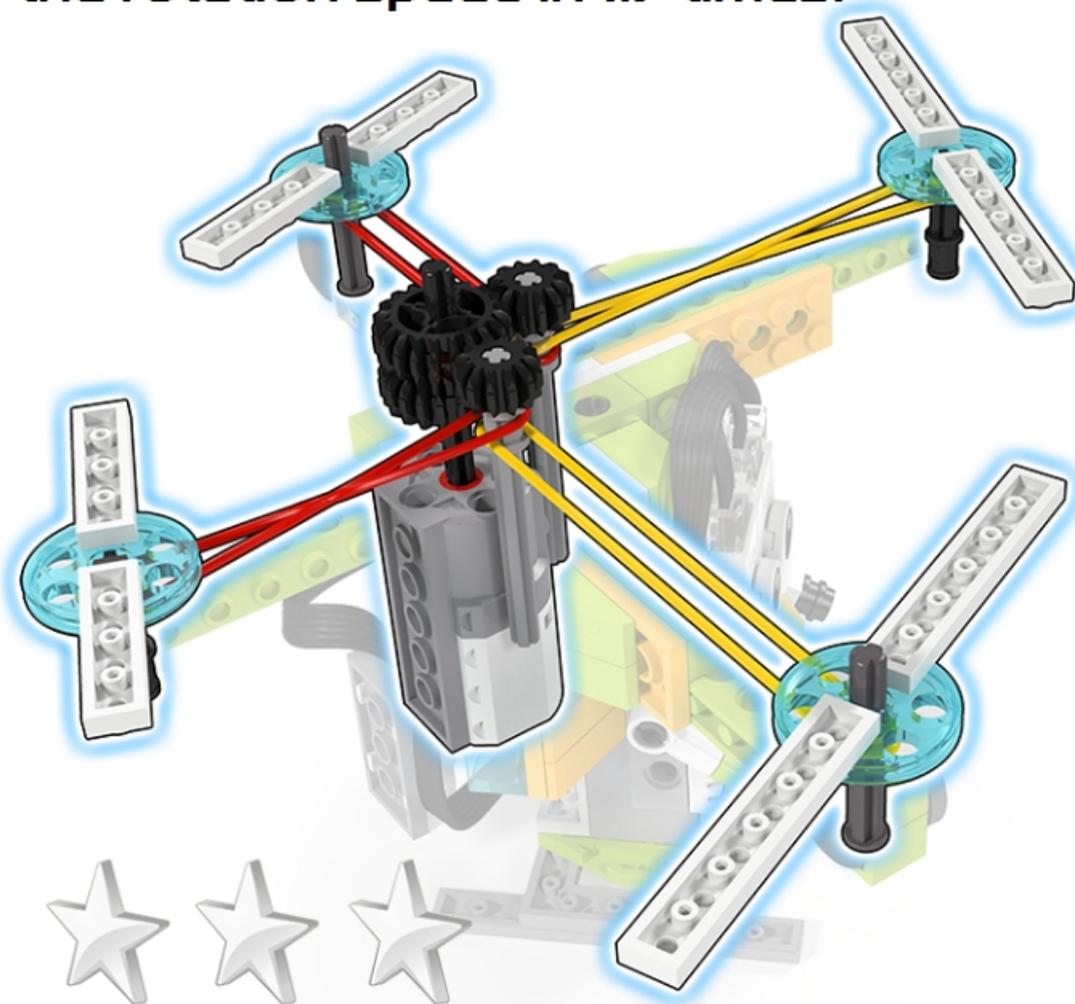

- ▶ smarthub
- ▶ motor
- ▶ sensor

Features

The transmission consist of 20- and 12-tooth gears. It increase the rotation speed in 1.7 times.

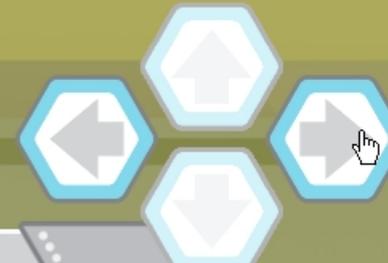

Find:

- Gears
- Belt drive
- Propellers

nerka@gmail.com

Features

The rotation is transmits from the one main axle to the two support axles and via Belt drive to the propellers.

nerka@gmail.com

Check it out!

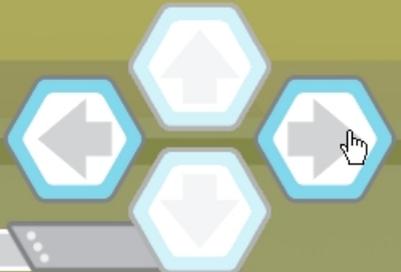

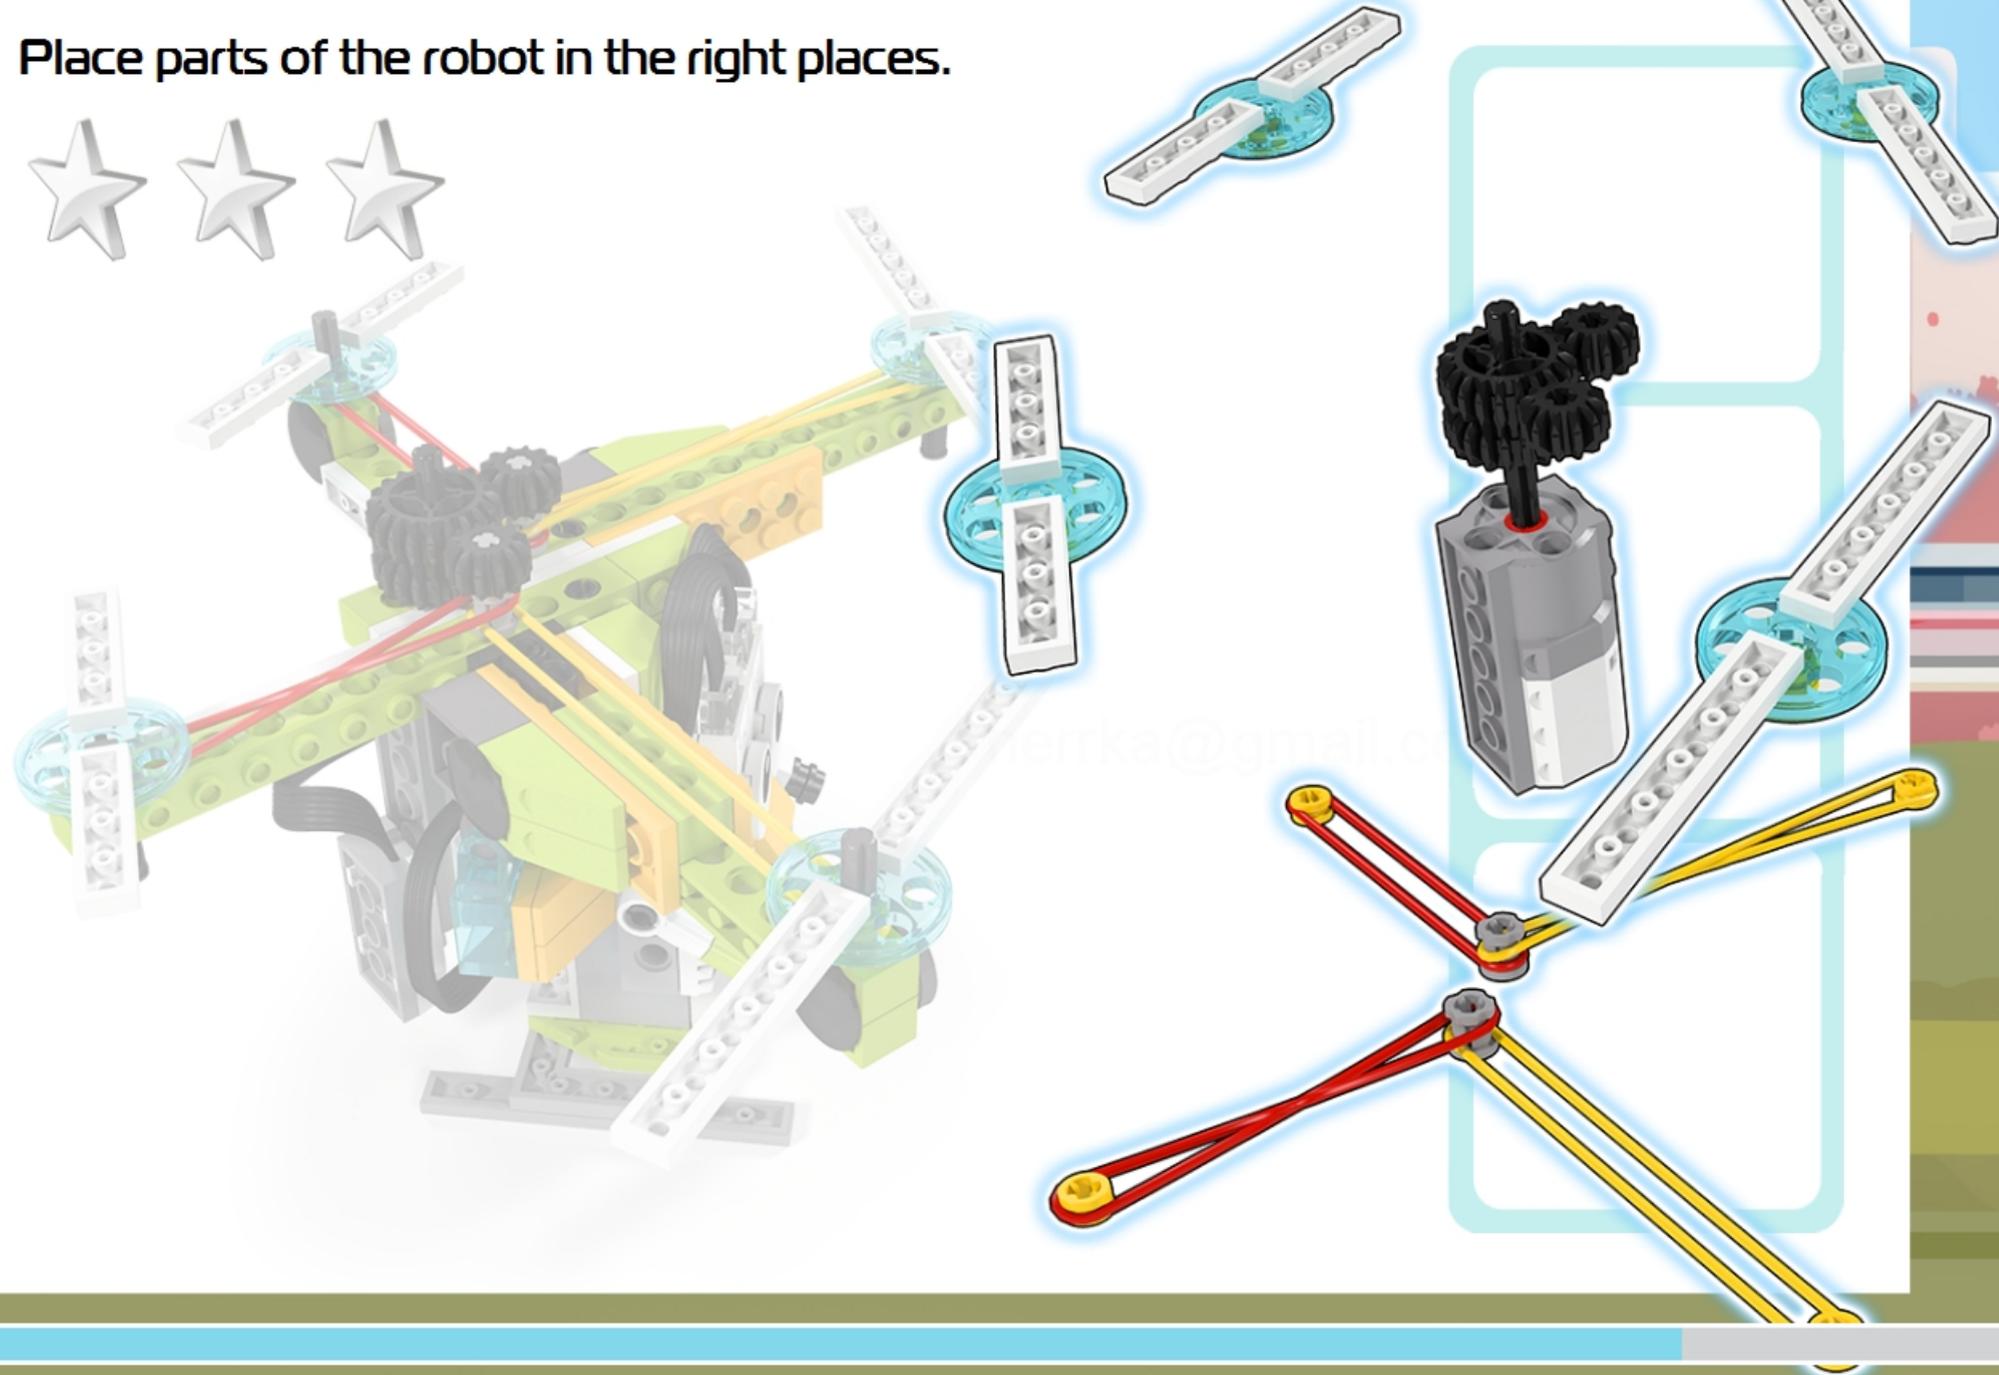

Avoid any friction
between the cables
while robot is moving.

TASK

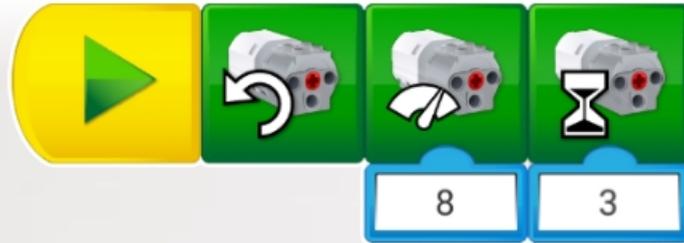

Place parts of the robot in the right places.

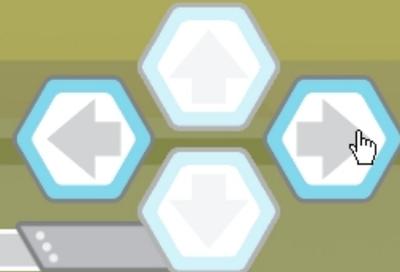

Task 1

Check the mechanism. The propellers must to spin smoothly and don't touch any other parts of the robot.

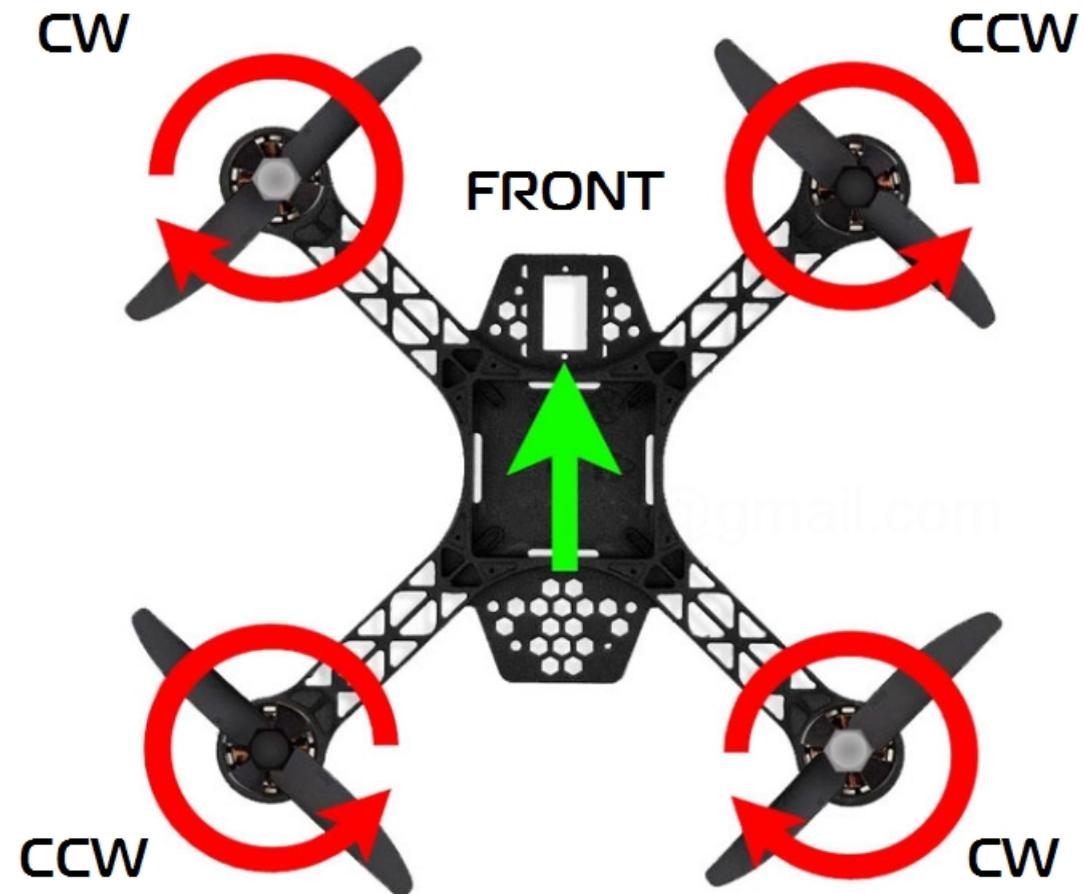

roboriseit.com

Direction of the rotation

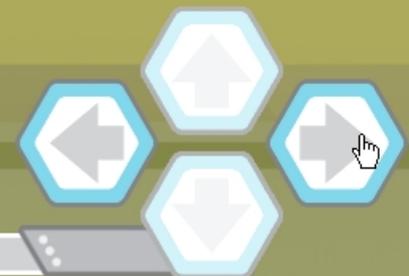

Check the props directions. The Quadcopter for successful operation needs the following directions of propeller rotations:

0

92

Task 2

ROBORISE-IT!
ROBOTIC EDUCATION

Look closer to the design of the transmission and make the changes that will makes the directions of the propellers' rotation the correct.

roboriseit.com

0

93

Task 3

ROBORISE-IT!
ROBOTIC EDUCATION

Due to the safety rules the drone must have the lights for easy recognition in the sky. Program the flashing of the red lamp.

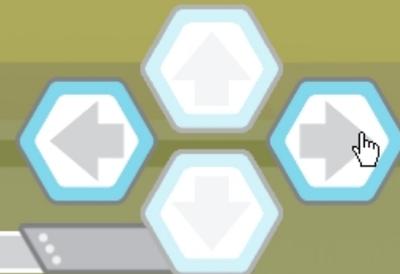

roboriseit.com

0

94

Task 4*

ROBORISE-IT!
ROBOTIC EDUCATION

To decrease the load on the mechanisms usually the smooth speed increasing is used. Program such start of the motor.

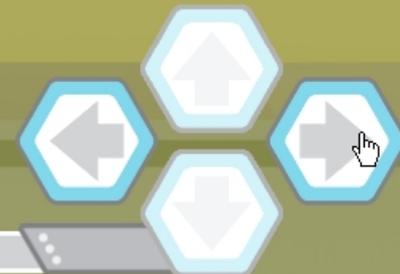

roboriseit.com

0

95

Speed and Thrust

Unlike helicopters, the thrust of the propellers of quadrocopter depends from propellers' rotation speed. While the speed of rotation is not very high, the Thrust increases with the increasing of the rotation speed.

If the rotation speed is high, the drone takes off.

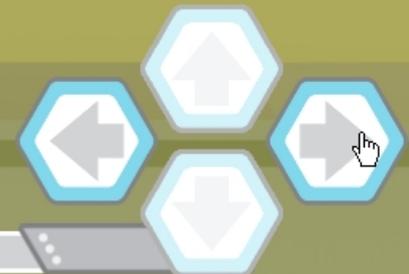

At some medium speed the drone may to hang in the air.

If the rotation speed is low, the drone go down.

nerka@gmail.com

Task 5

Program the robot for maintaining the height. To do this the correspondence between the Motor speed and the Motion sensor data must be programmed. At the low altitude motor must increase the speed and at the high altitude it must decrease the speed.

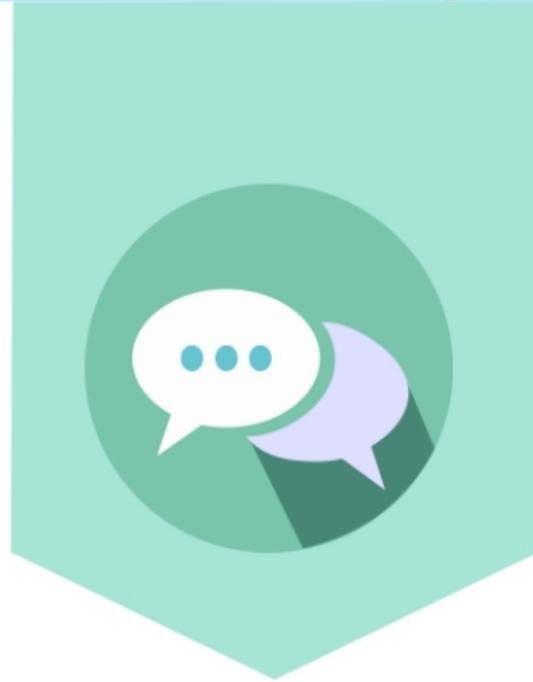

0

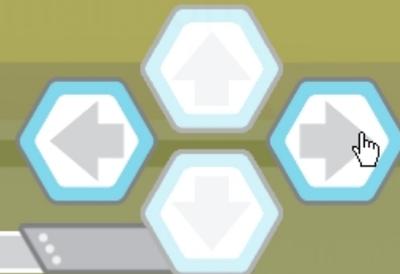

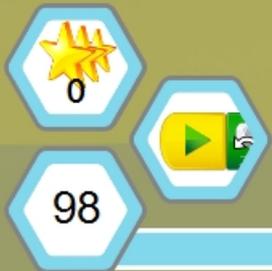

97

Discuss the task!

What math operation may help to invert the Motion sensor data for translate them to the motor?

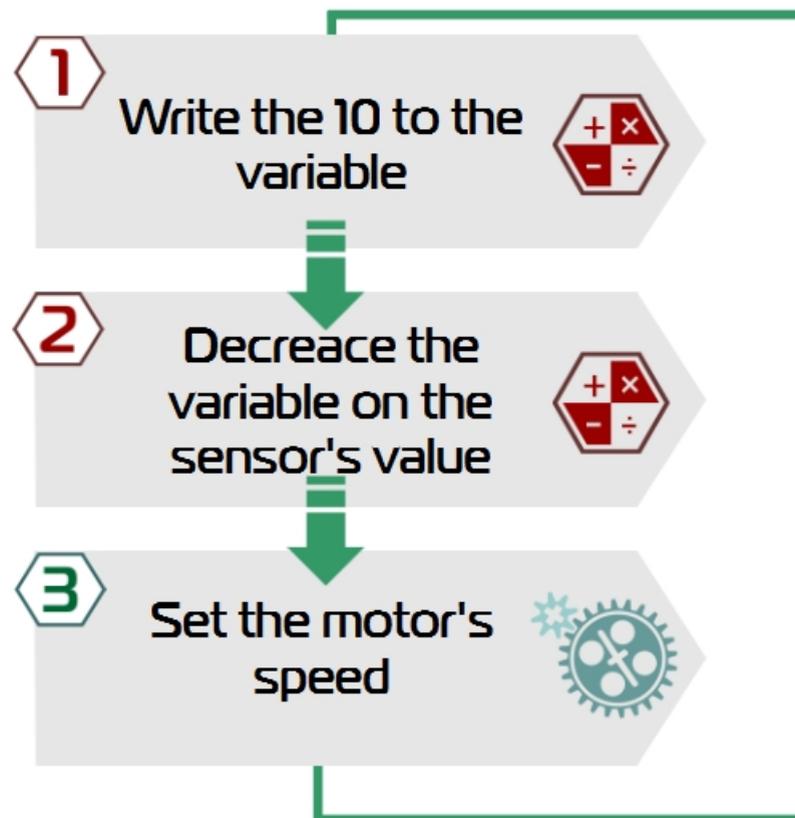

Task 5. Algorithm

The program should run by the following algorithm:

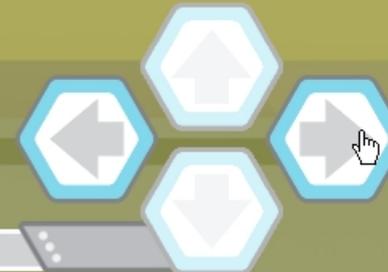

nerrka@gmail.com

0

99

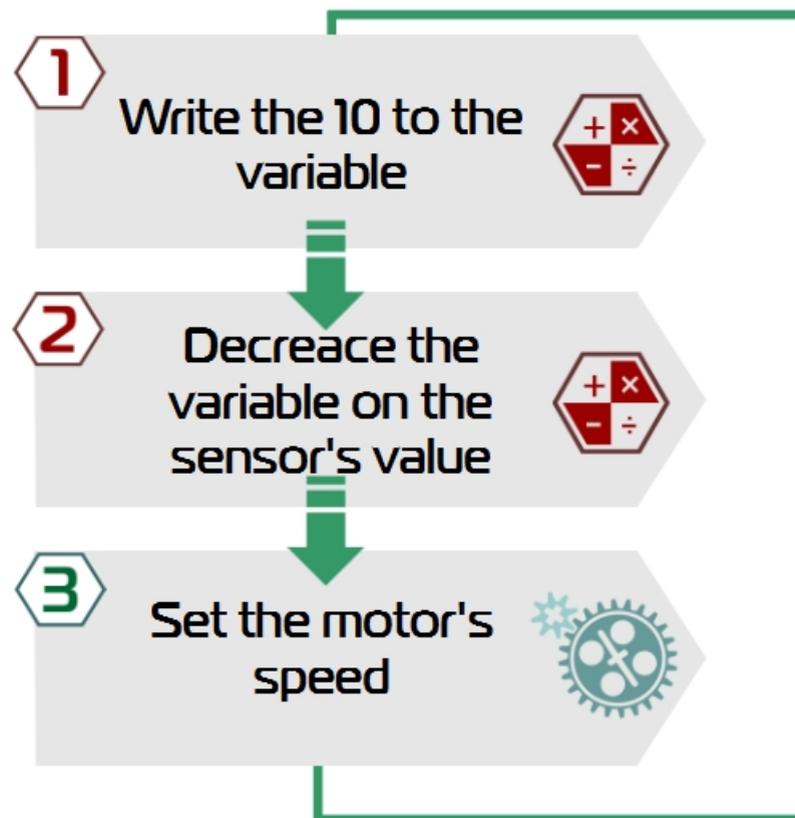

Task 5. Algorithm

The program should run by the following algorithm:

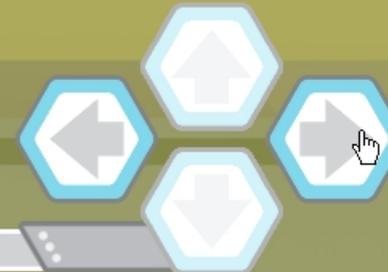

nerrka@gmail.com

0

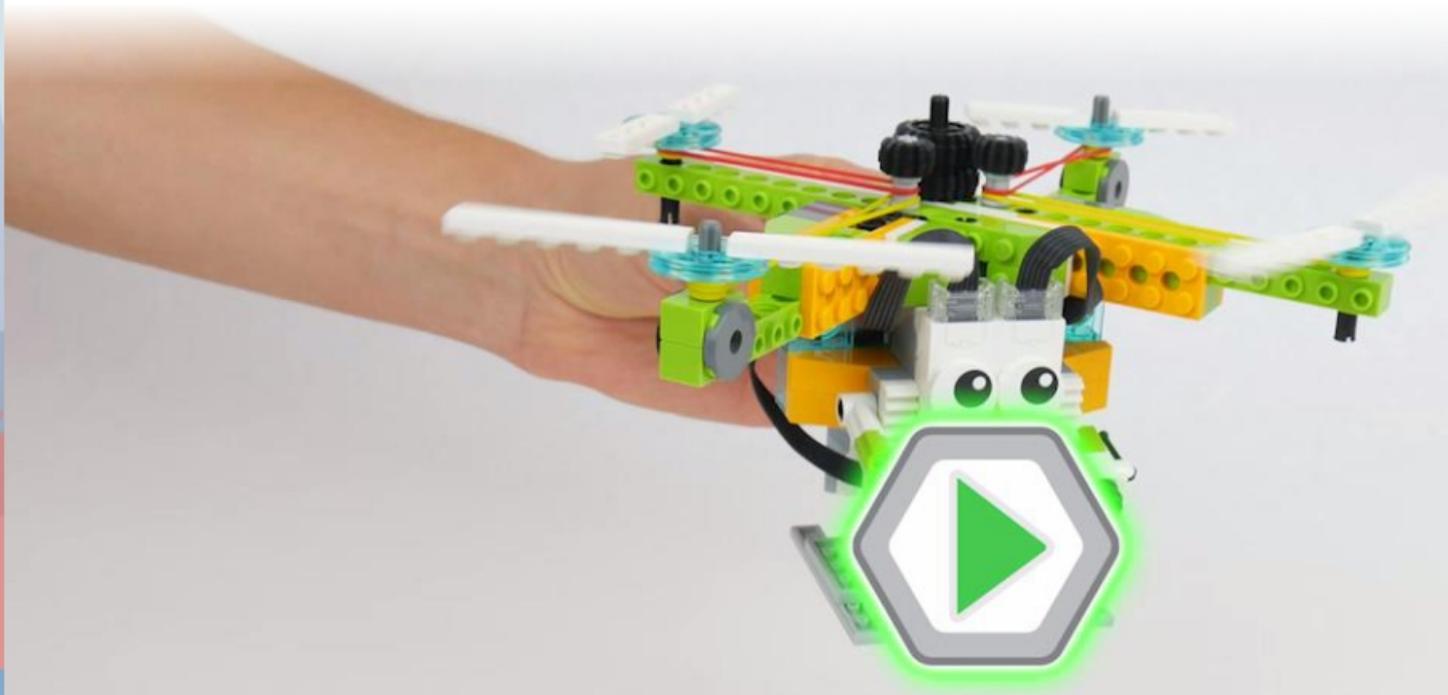

99

Task 6

Improve your program! Add the sound alert about the low altitude and add the special sound for the drone crash (when altitude is zero).

0

100

Task 6. Program

One of the possible solutions is shown below. At the each loop iteration the message with the sensor data is sent. If the altitude is low (0, 1 or 2) the corresponding sound is played.

0
101

Question

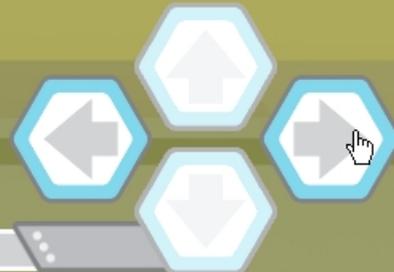

How do you think, why drones usually has 4 propellers but not 1 or 2?

0

102

TASK

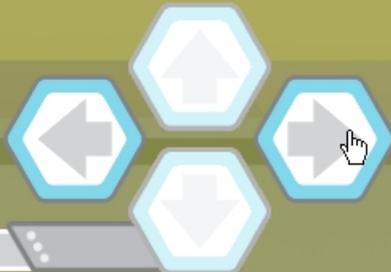

Arrange this flying machines by the speed.

0

103

Discuss!

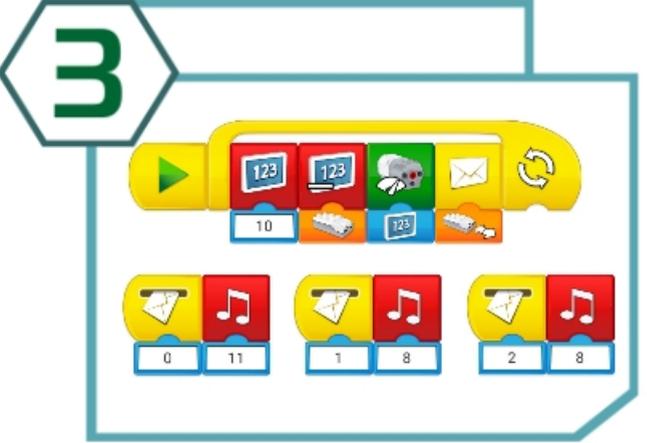

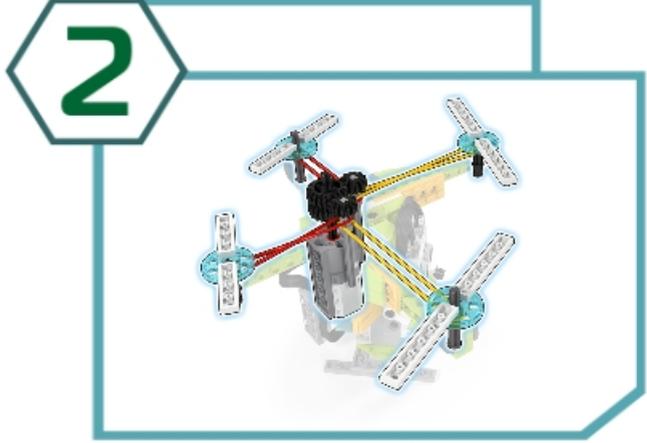

- How to film the sport?
- What advantages the quadcopter has?
- How the Motion sensor used in the robot?

Your achievements
