# Dino Park

关注公众号获取更多

Today we continue to create a modern Dino Park. We have to create a robot for exposition of the Paleozoic era Carboniferous period.

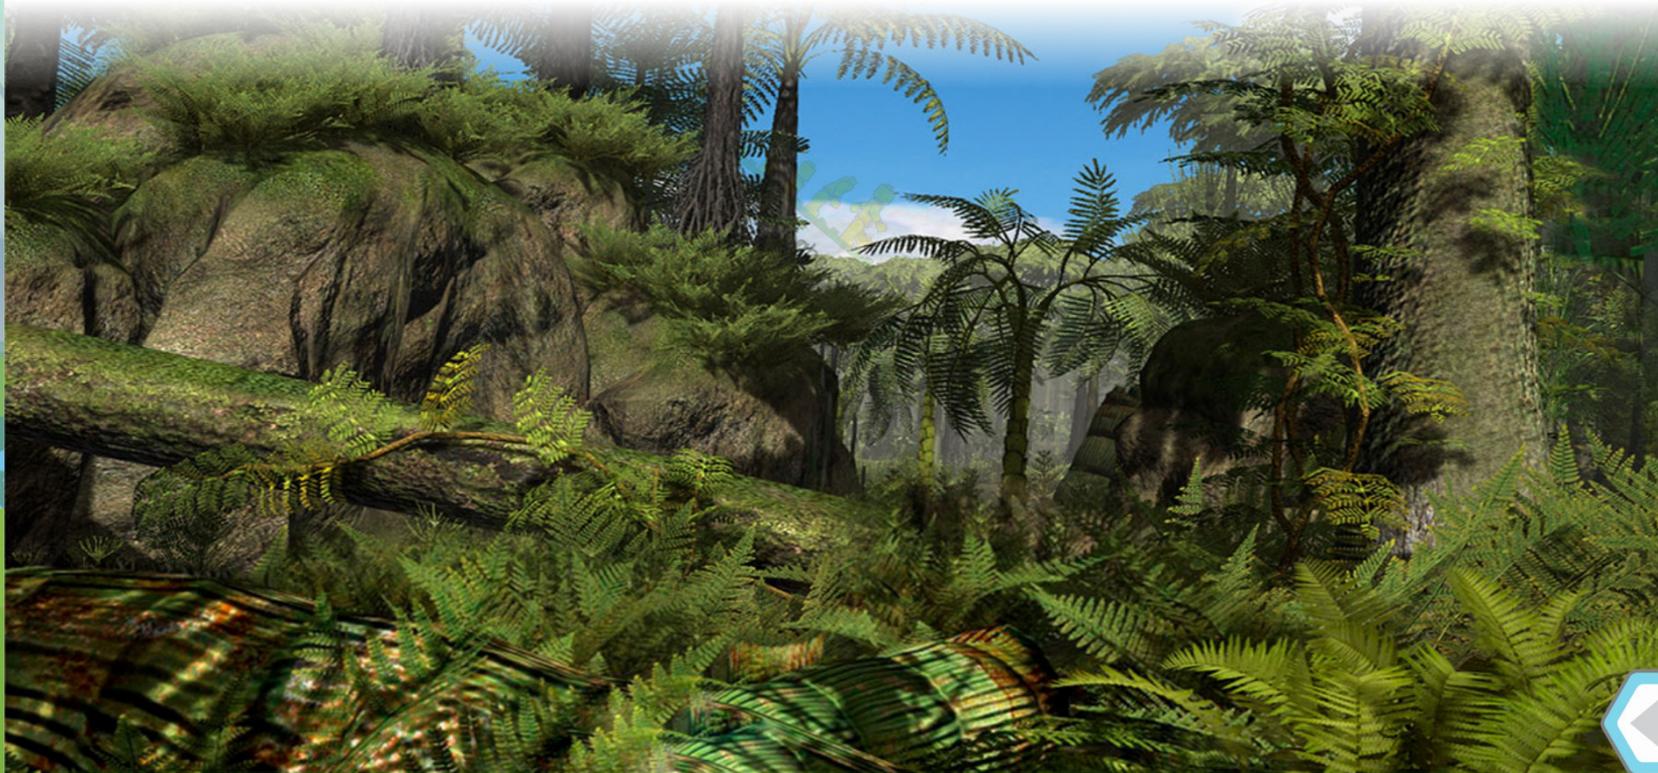

# Dino Park

关注公众号获取更多

In the Carboniferous period is flourishing of insects and amphibians. On a dry land, spore plants grew - horsetails, ferns and mosses. Only at the end of the period appear the first reptiles.

4

7

# Discussion of the task

**What do you know about the insects that inhabited Earth in the Paleozoic era?**

4

8

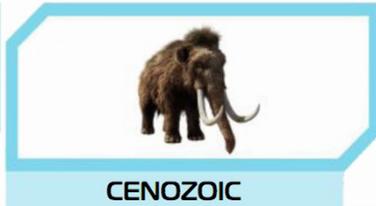

# Insects Paleozoic

关注公众号获取更多

The first insects appeared long before the dinosaurs in the Paleozoic era. At first they were quite small and inhabited only the surface. Later they developed their wings. In those days, air was inhabited only by them.

Insects have appeared many years ago, but now they make up three quarters of all living beings on Earth.

# Insects Paleozoic

关注公众号获取更多

Fossil remains indicate that the insects of the Paleozoic era had enormous proportions. Scientists believe that this was possible thanks to the greater concentration of oxygen in the atmosphere than it is now.

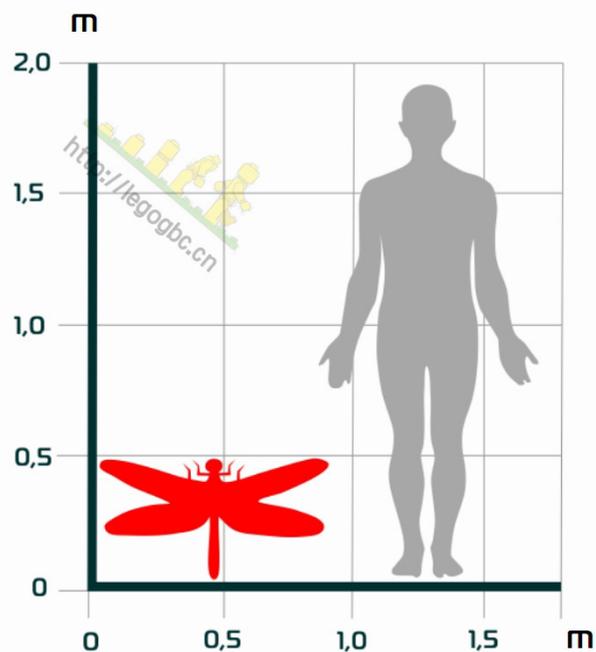

# Insects Paleozoic

关注公众号获取更多

Meganeura, the imprint of which you saw on the previous slide, had size to 75 cm and was a dangerous predator. It hunted on other insects that inhabited the air.

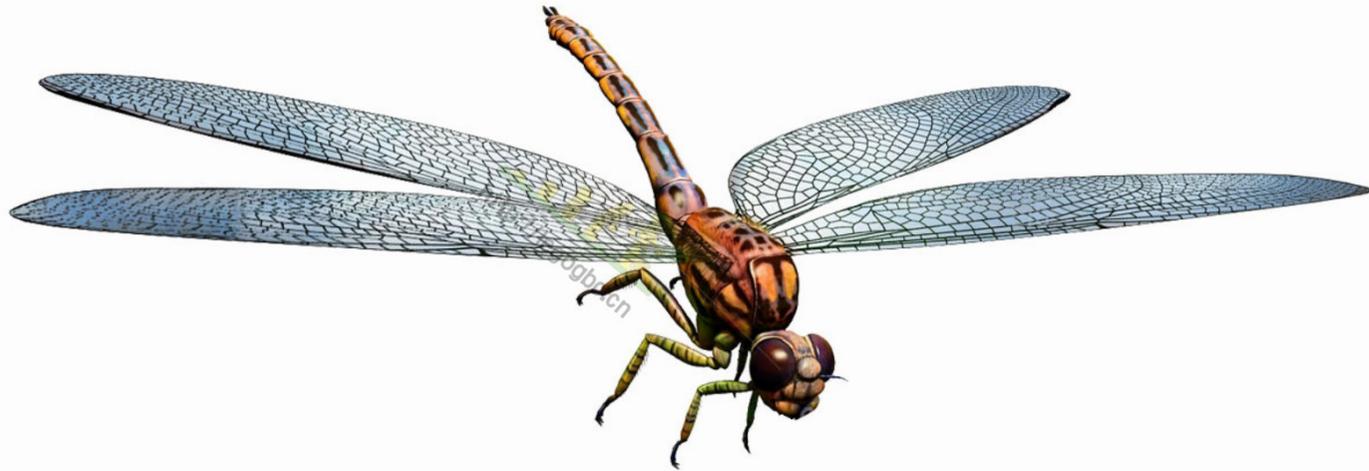

# Meganeura

关注公众号获取更多

This insect was similar to a modern dragonflies, but it is not its ancestor. Modern dragonflies have appeared much later and are not connected with Meganeuras.

A set of navigation icons including a left arrow, a right arrow, and a downward arrow.

# Meganeura

关注公众号获取更多

Unlike modern dragonflies, Meganeuras had stronger legs and a simpler pattern of veins on the wings. They flew very quickly, caught and ate prey in the air.

4

13

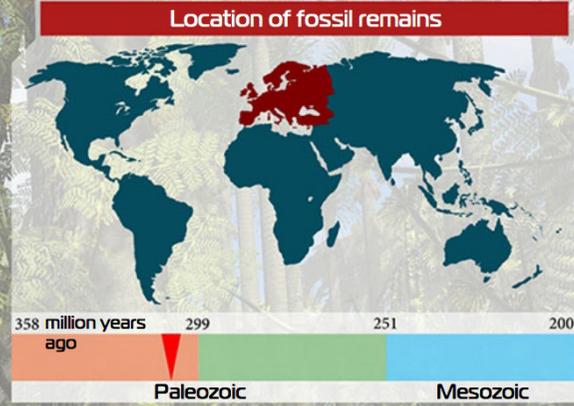

# Meganeuras

关注公众号获取更多

Meganeurs hunted on other insects of the Carboniferous period. Their fossil remains are found in the territory of modern Europe.

# Dino Park

关注公众号获取更多

Today we are moving to creating an exposition of prehistoric insects. In the Carboniferous period, they grew to enormous sizes, so visitors of the park would be interested to watch them.

What features of Earth at that time made it possible to develop huge insects?

4

15

# TASK

关注公众号获取更多

## Task

- create an insect robot for exposition of the Carboniferous period

## Requirements

- should be similar to the insect of the Perm period - Meganeura
- the movement of the robot's wings must repeat the movement of the wings of real insect

## Meganeura's appearance

4

17

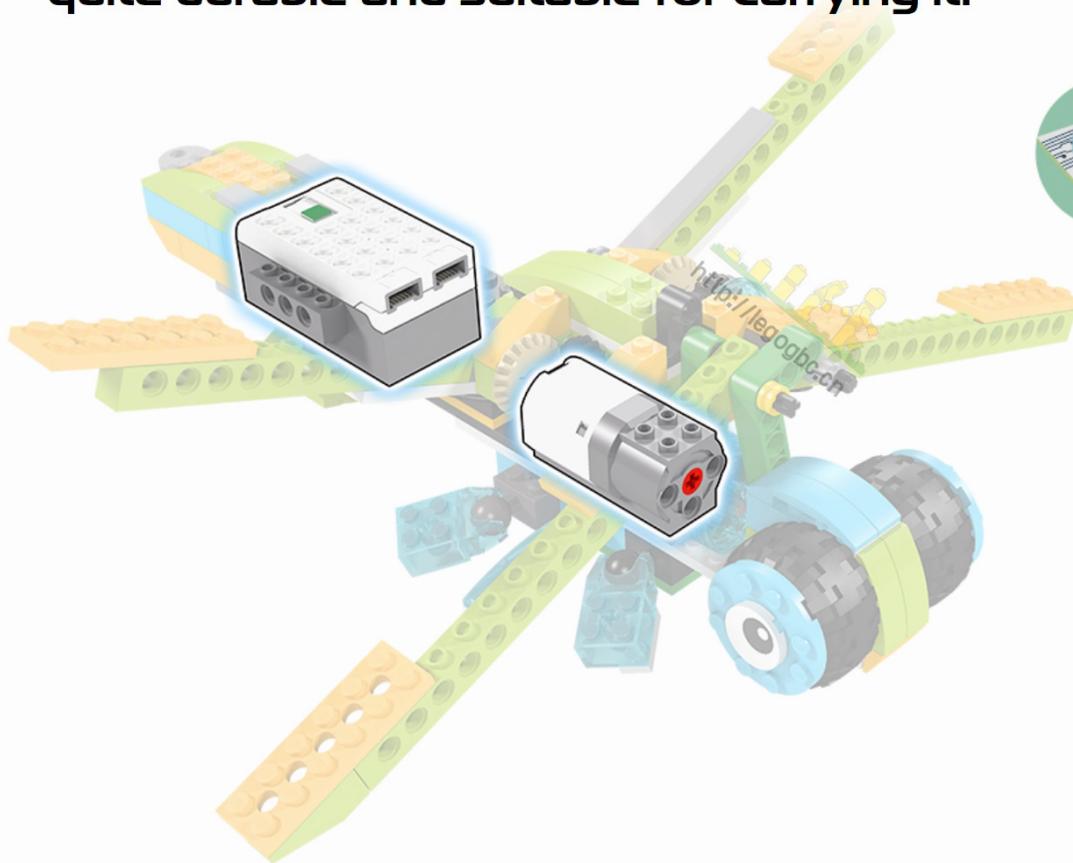

# Design features

关注公众号获取更多

Meganeura uses a motor to drive all four wings. Additional sensors are conveniently attached to the back of the robot. It is quite durable and suitable for carrying it.

Find:

- ▶ smarthub
- ▶ motor

4

18

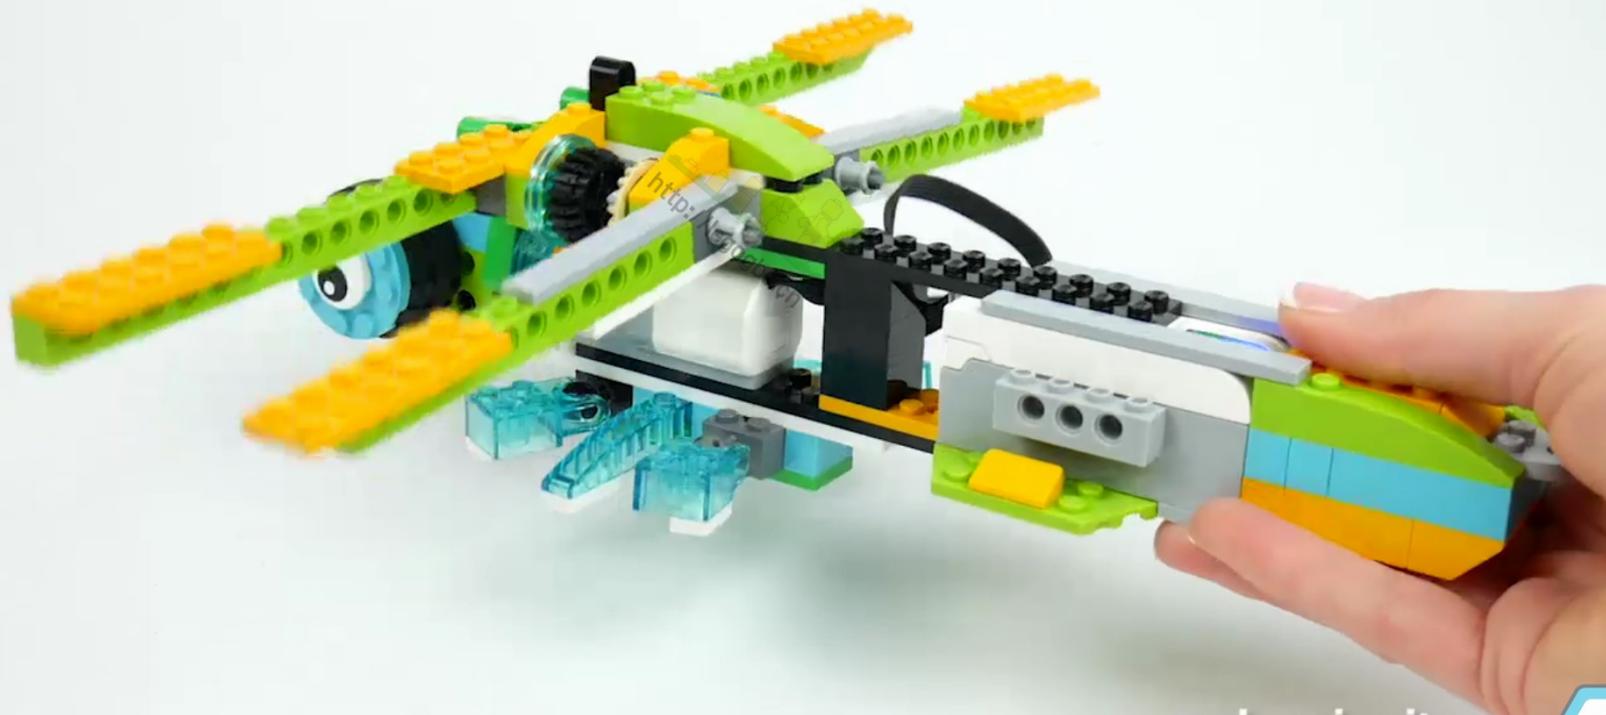

# Design features

关注公众号获取更多

When carrying the robot it is best to keep it behind the tail. It is strong enough. In addition, in such a position, the motion of the wings does not interfere with keeping the robot.

roboriseit.com

4

19

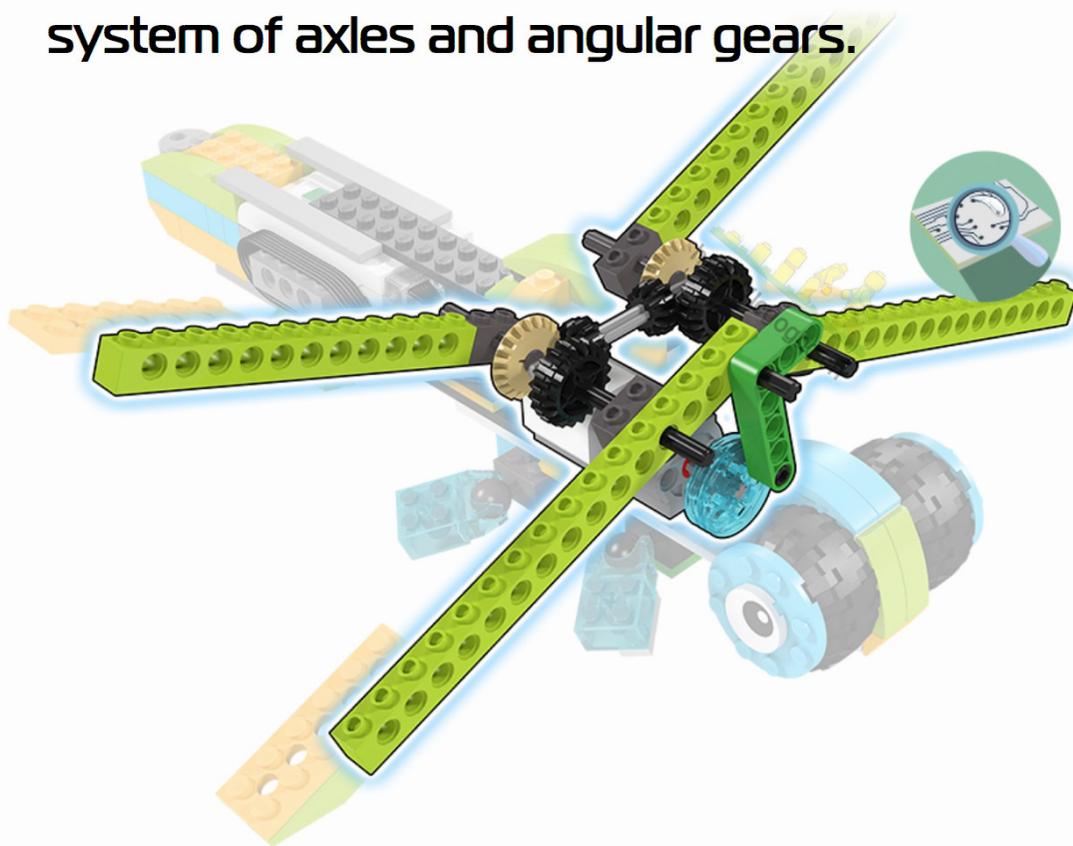

# Design features

关注公众号获取更多

The crank converts the axis rotation of the motor into translational motion. The beam transmits the force on the right front wing, and from it the movement is transmitted to other wings through the system of axles and angular gears.

Find:

- ▶ crank
- ▶ moving beam
- ▶ right front wing

4

20

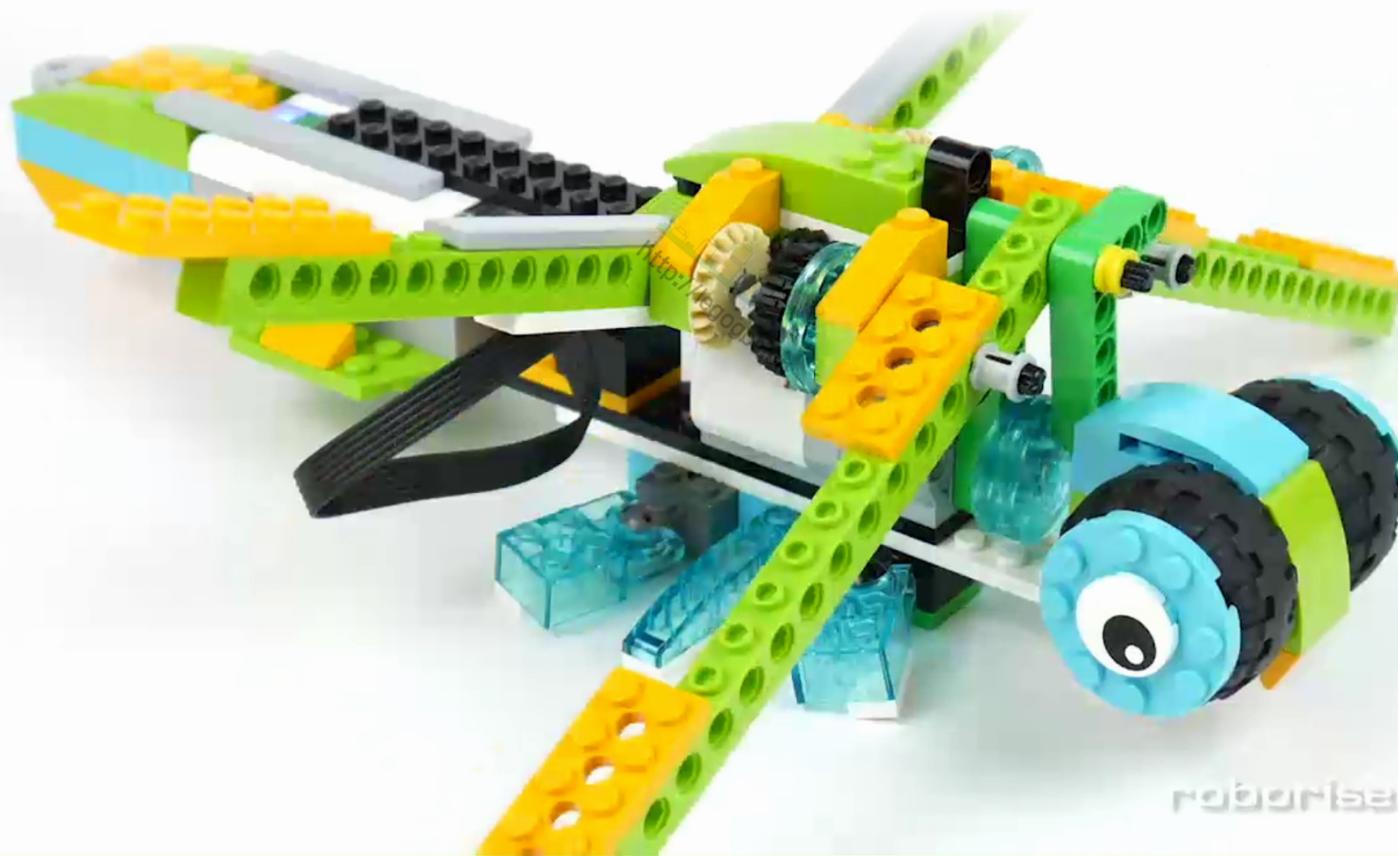

# Design features

关注公众号获取更多

Follow the transformation and transmission of motion in the wings drive. Thanks to the crank it was possible to realize the wingspan without changing the direction of rotation of the motor.

robotisat.com

7

121

# Discussion of the task

关注公众号获取更多

<http://legogbc.cn>

**How can sensors be used in the robot insect?  
What robot's functions can be programmed to make  
the behavior of the robot more natural?**

7

122

# Let`s remind. Motion sensor

关注公众号获取更多

Motion sensor determines the distance to objects in front.

The sensor emits infrared light (like a TV remote or conditioner) and measures the amount of light returned. If a lot of light has returned, then the object is nearby, and if it is small, then the object is far away.

7

123

# Tilt sensor

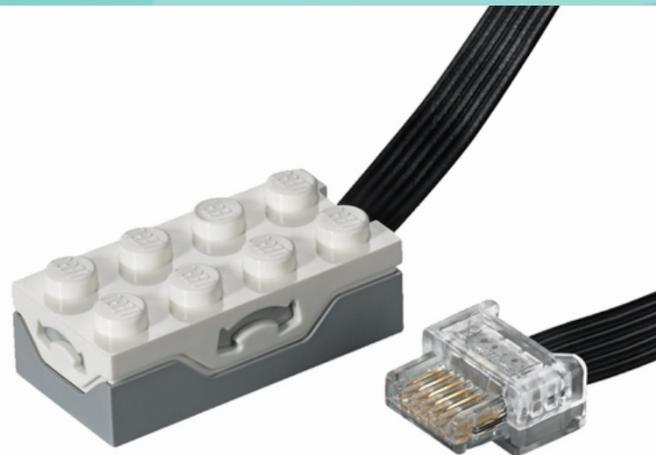

关注公众号获取更多

The tilt sensor determines its position in space and can react to the shaking.

The tilt sensor can register one of the five states:

- ▶ horizontal position
- ▶ tilt forward
- ▶ tilt back
- ▶ tilt to the left
- ▶ tilt to the right

<http://legogbc.cn>

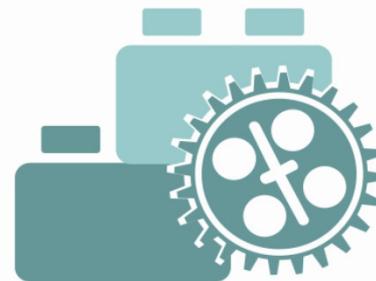

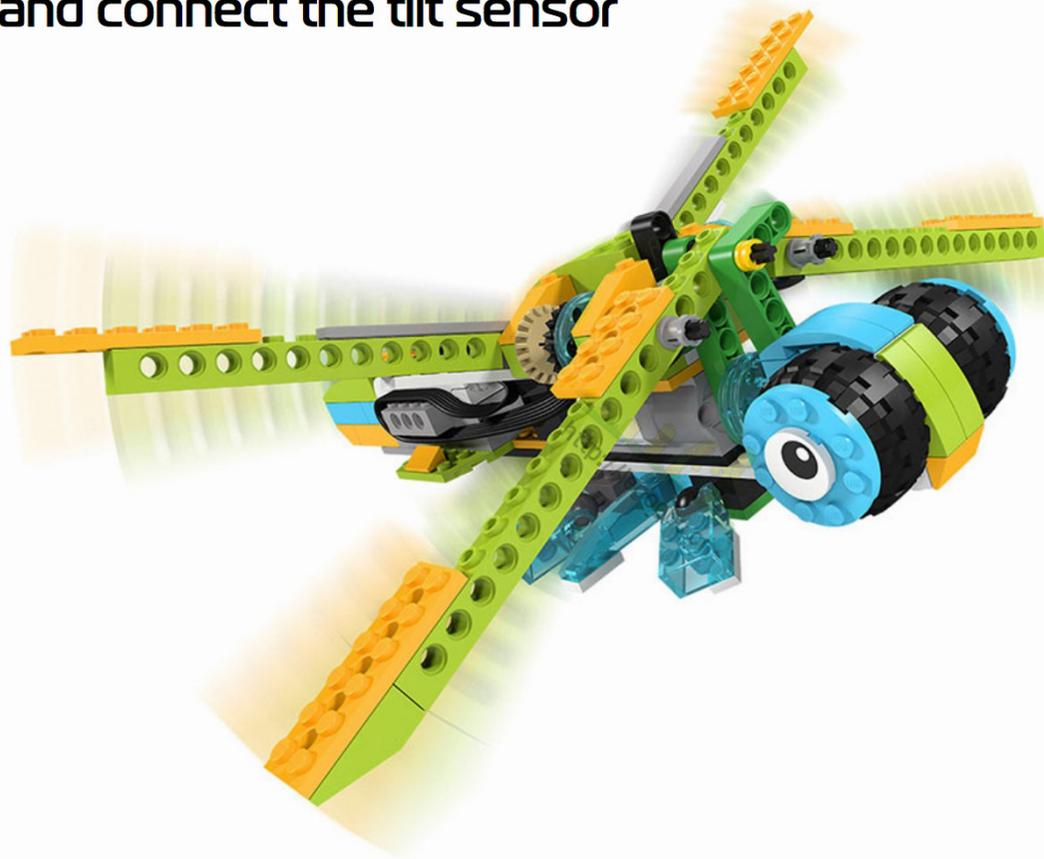

# Additional sensors

关注公众号获取更多

Fix and connect the tilt sensor

# Task 2

关注公众号获取更多

Program the display of the tilt sensor on the screen. Take the robot in your hands and experiment. Write the numbers corresponding to each tilt:

robotiseit.com

7

130

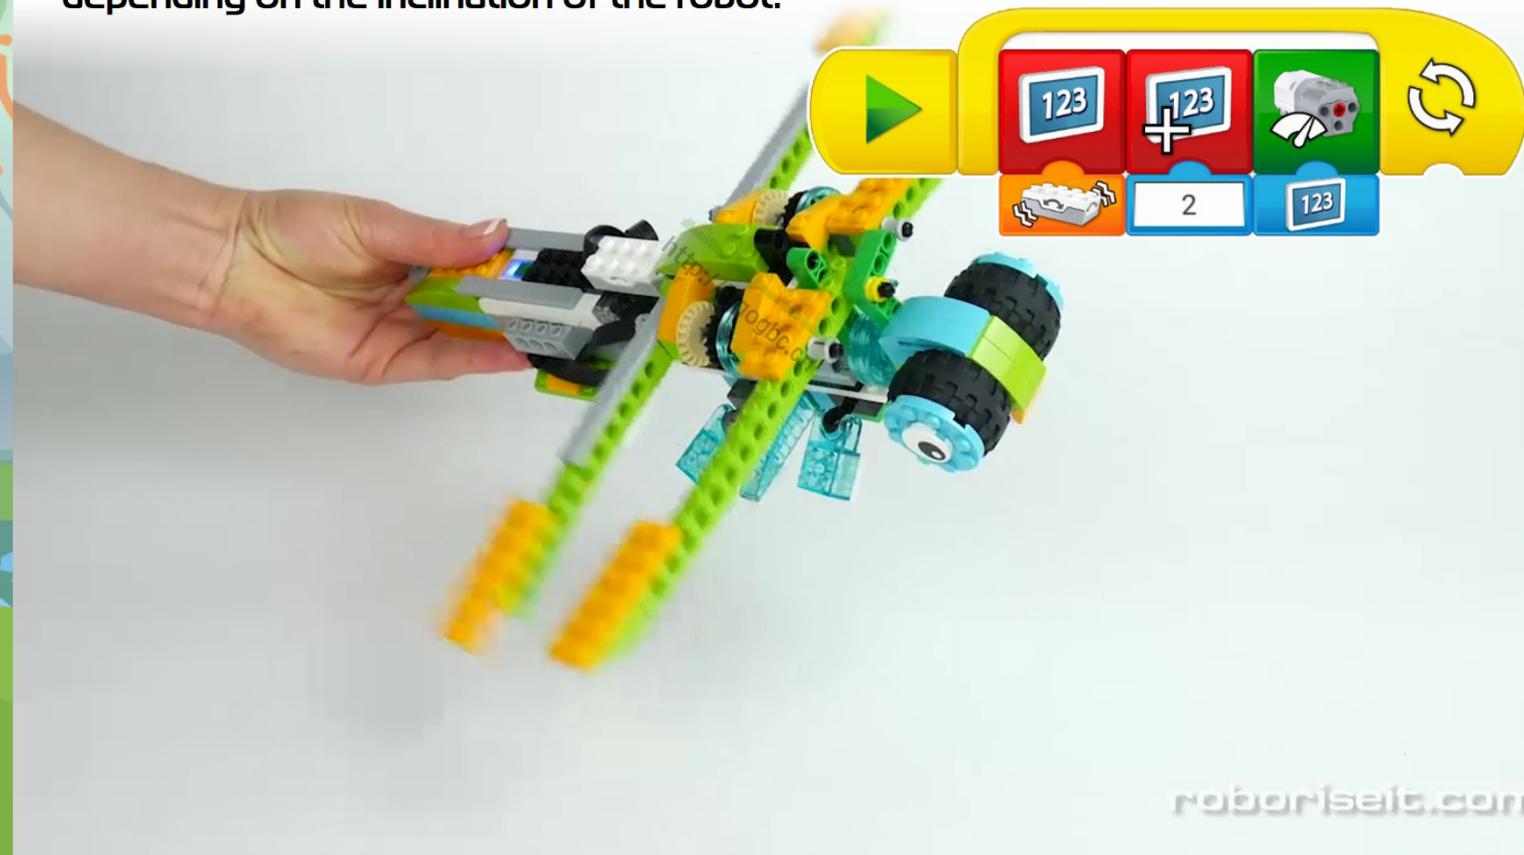

关注公众号获取更多

# Task 3

Meganeuras could fly in any direction due to the change in direction and force of the wings. We will also program the change in the speed of the wingspans, depending on the inclination of the robot:

robobiseit.com

0

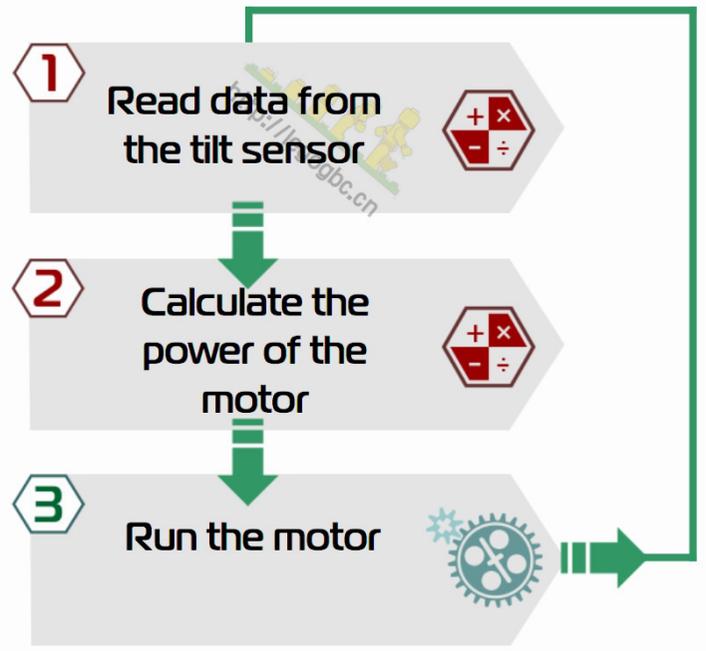

131

关注公众号获取更多

# Task 3. Algorithm

You may have noticed that in the horizontal position the tilt sensor data is zero. If we use direct data transfer to the power of a motor, the wings will not move in a horizontal position. Therefore, an additional calculation is required. The program should work with the following algorithm:

0

132

关注公众号获取更多

# Task 3. Program

1 Read data from the tilt sensor

Step: 1 — 2 — 3

0

133

关注公众号获取更多

# Task 3. Program

- 1 Read data from the tilt sensor
- 2 Calculate the power of the motor

0

133

关注公众号获取更多

# Task 3. Program

- 1 Read data from the tilt sensor
- 2 Calculate the power of the motor
- 3 Run the motor

Step: 1 — 2 — 3

0

133
