New day at the robots` factory

ROBORISE-IT!
ROBOTIC EDUCATION

Hello!
The town on the other side of the island has been suffered from tsunami. Infrastructure, port and airport are damaged, roads are destroyed. First of all we must to find the way to deliver the humanitarian aid to the town. There are not enough helicopters to do this. In our city there are trucks, but they are can't move without the roads. Our task is to figure out how to use available resources to help the victims.

TASK

TASK

- to find a way to deliver the humanitarian aid

Steps

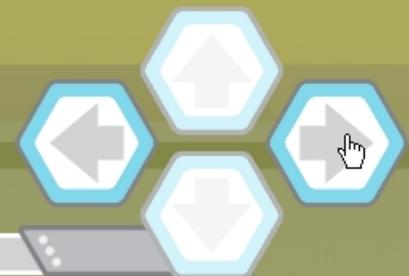

- to choose which transport is better suits for such task
- to test the chosen transport and define what must be improved
- to make the improvements and test the robot

0

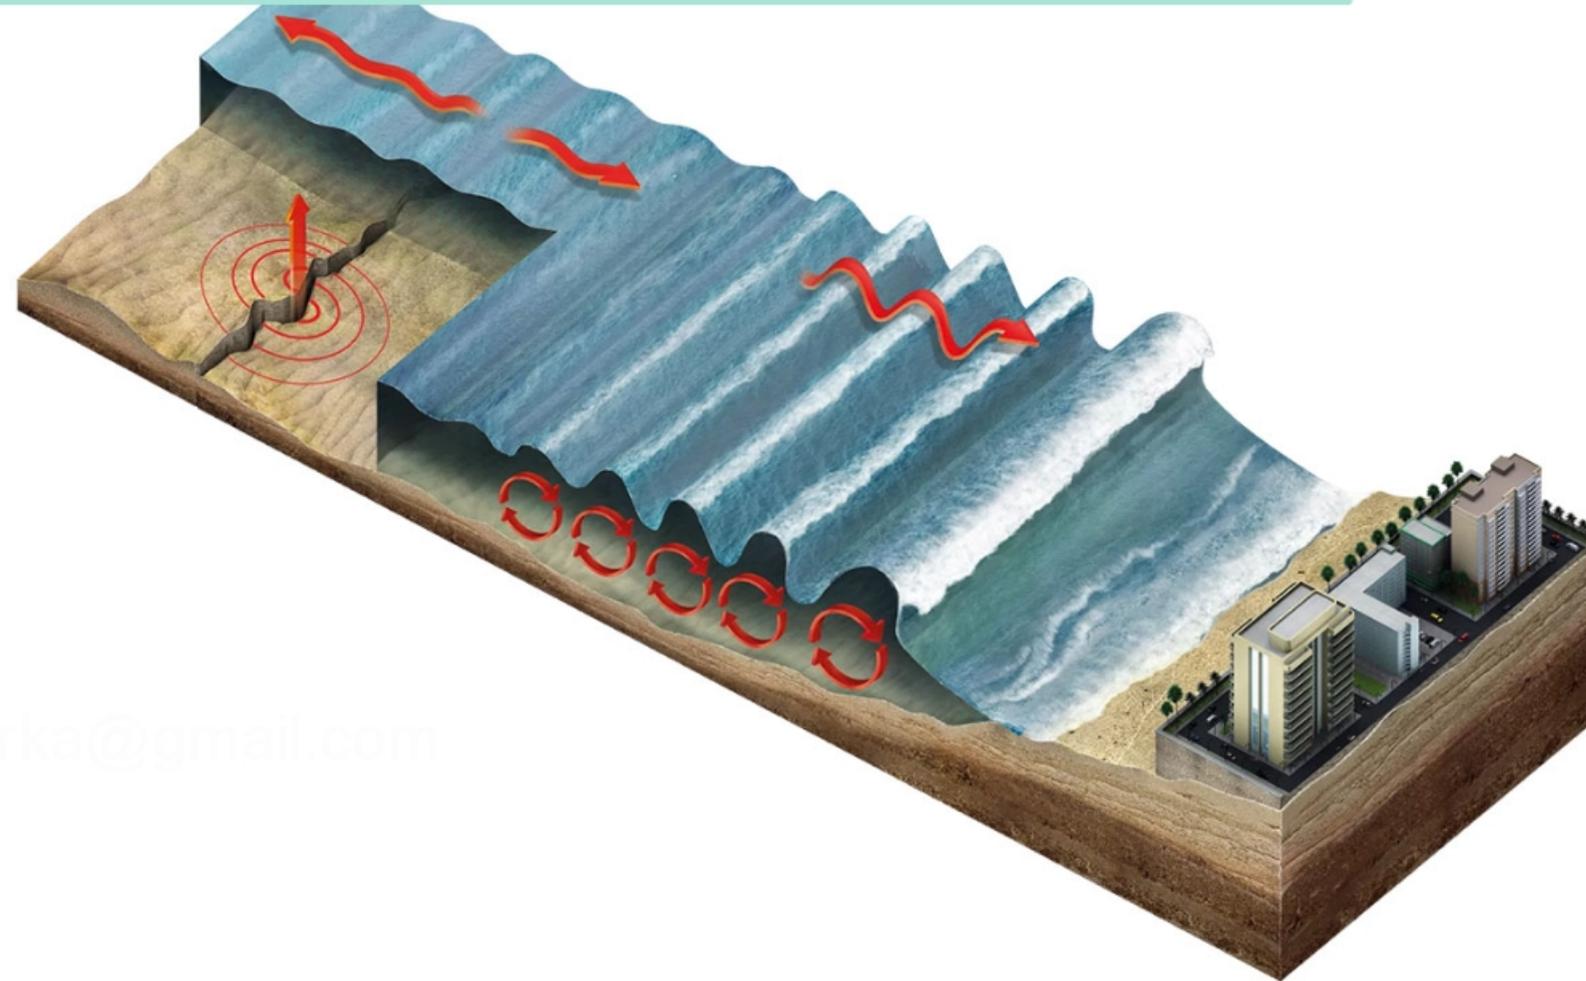

4

Tsunami

Tsunami is a series of waves in a water body caused by the displacement of a large volume of water. In the open sea they are not so big, but at the beach the wave become giant.

rrka@gmail.com

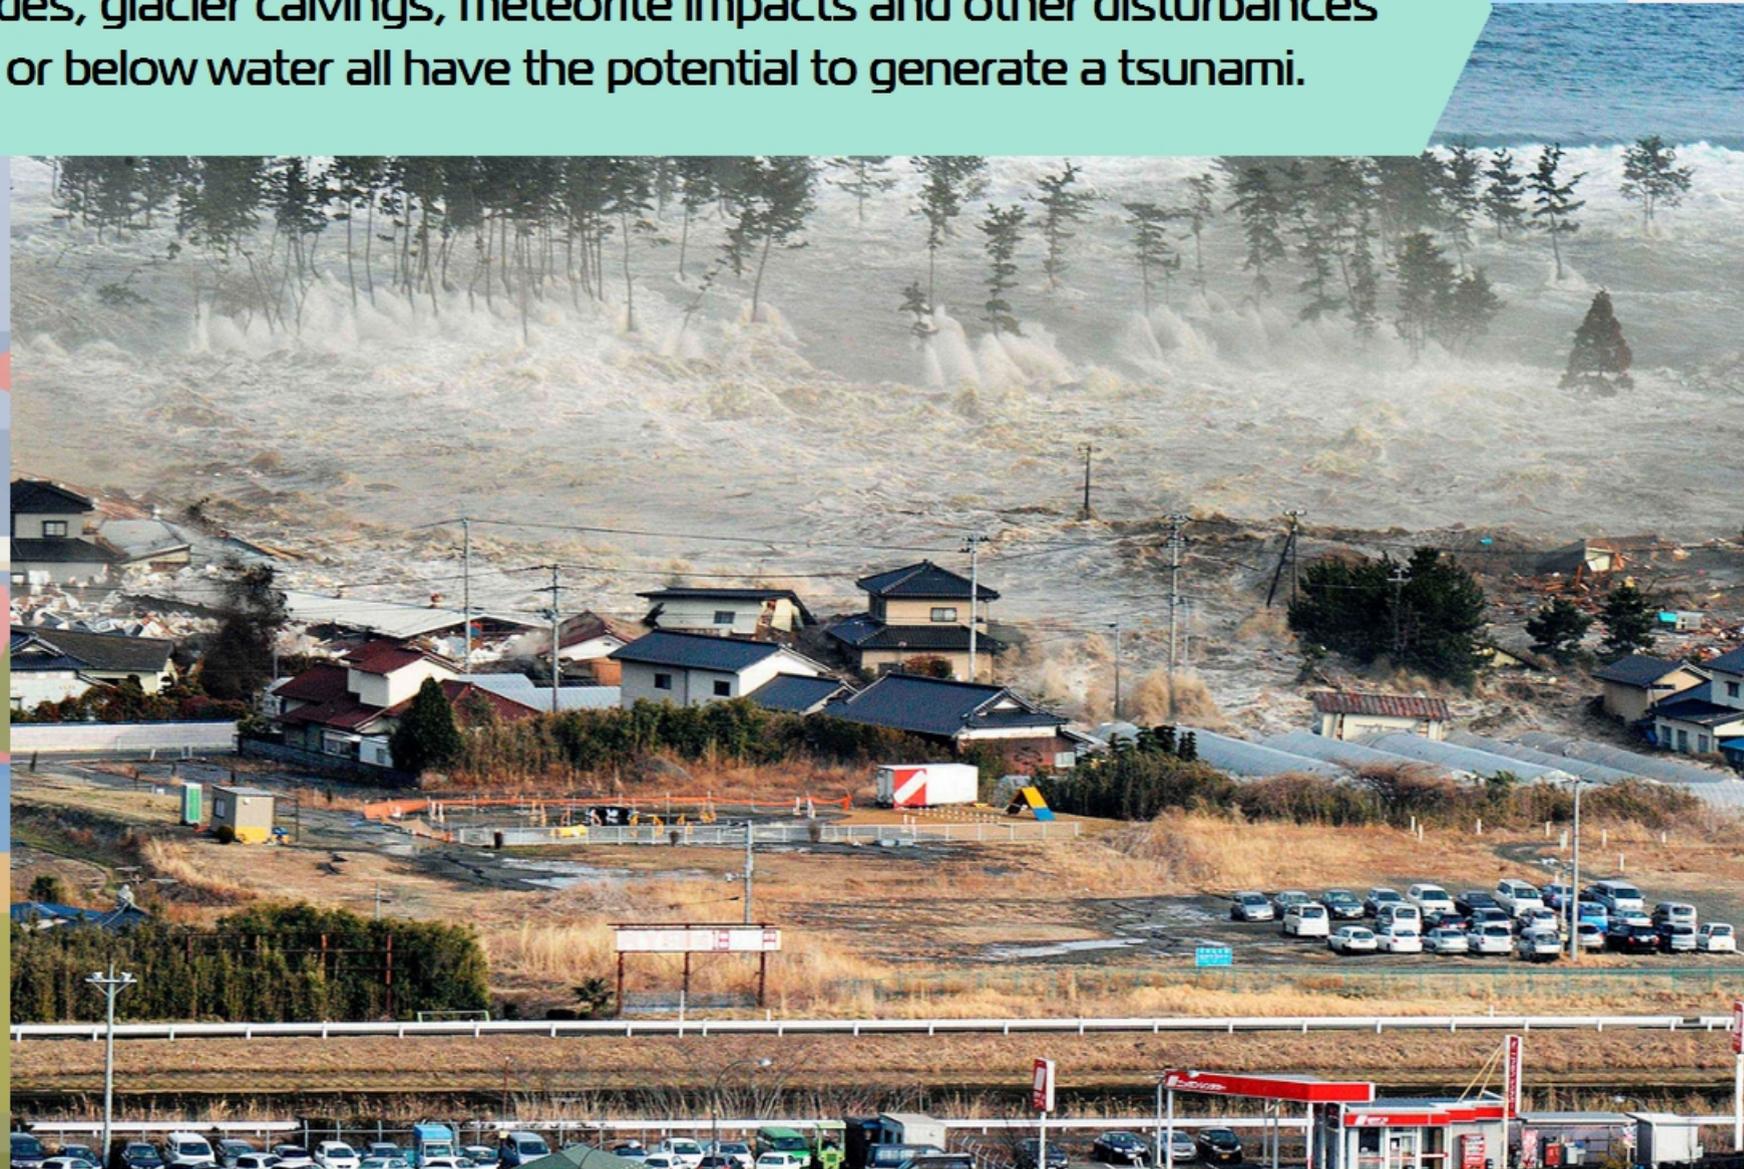

0

5

Tsunami

Earthquakes, volcanic eruptions and other underwater explosions, landslides, glacier calvings, meteorite impacts and other disturbances above or below water all have the potential to generate a tsunami.

Tsunami

ROBORISE-IT!
ROBOTIC EDUCATION

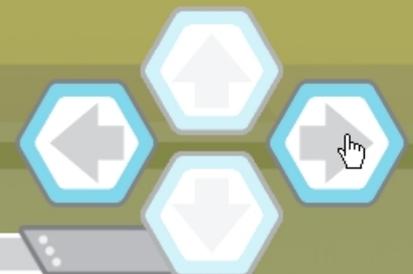

Tsunamis lead to catastrophic destruction on land. All roads, bridges, any communication routes are destroyed.

0

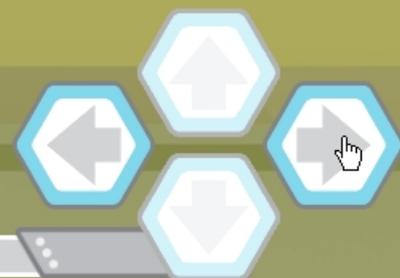

7

Tsunami

To liquidate the consequences of the tsunami, huge forces and resources are being applied. This is not an easy task for any country. Therefore, many countries render assistance to victims.

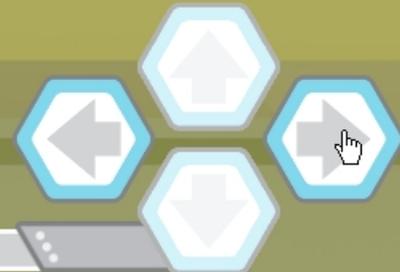

Discussion of the task

How do you think, what vehicles is better for the delivery of huge cargos?

Trucks

ROBORISE-IT!
ROBOTIC EDUCATION

Usually for deliver a lot of cargo the trucks are used. But the most of them are designed for moving on the roads. We needs a special truck that can operates on the rough terrain.

0

10

Rough terrain trucks

Such vehicles usually used by the military. But they haven't enough number of trucks. That's why we'll test the road truck and try to improve it for moving on the rough terrain.

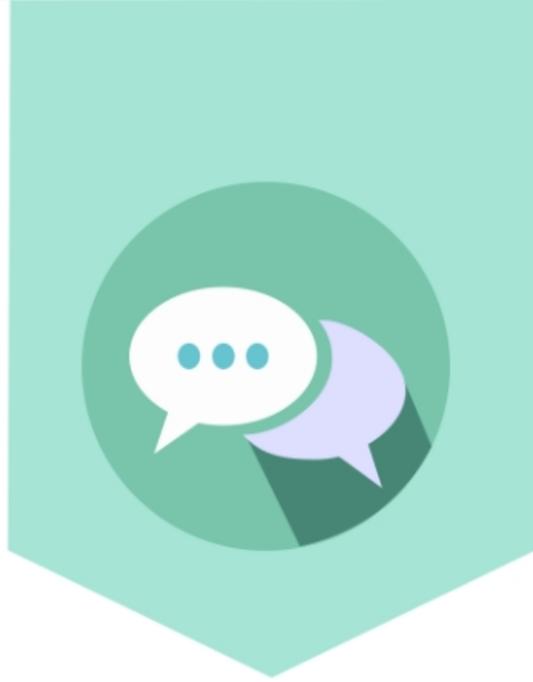

11

Discuss!

...@gmail.com

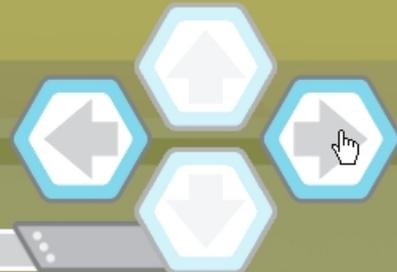

How do you think, what is the main factors that makes the vehicle good for off-road?

0

12

Ultimate off-road vehicles

ROBORISE-IT!
ROBOTIC EDUCATION

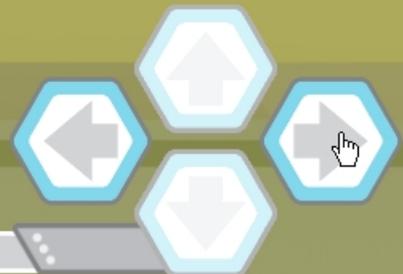

The extreme off-road vehicles are competing into one of the most famous annual rally raid The Dakar Rally. This is an off-road endurance event. Most of the special sections are off-road: dunes, mud, sands, rocks.

0

13

Discuss!

How to make the special off-road vehicle from the usual cargo truck?

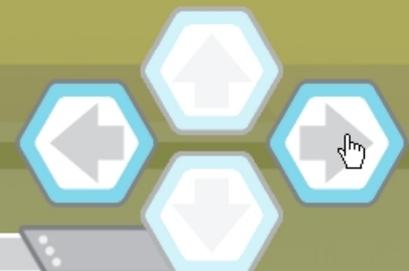

VS

Rough-terrain vehicles

Such vehicles usually has the some special features that makes them suitable for navigation without the roads. This is All-Wheel Drive, big-size Tires with low preassure, and big distance from the bottom of the vehicle to the ground.

Rough-terrain vehicles

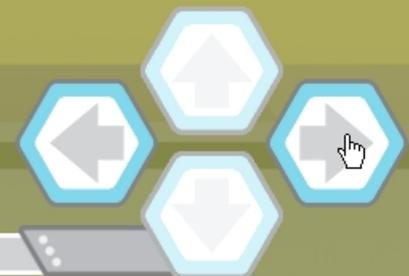

Also the suspension design is very important for the such vehicles.
The wheels must can move up and down for always touch the surface.

Truck's elements

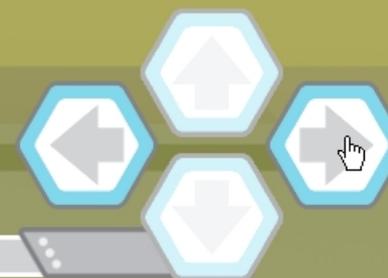

Meet Hero!

ROBORISE-IT!
ROBOTIC EDUCATION

First we'll build trucks that we have, and then we'll improve them to increase the passability.

nerka@gmail.com

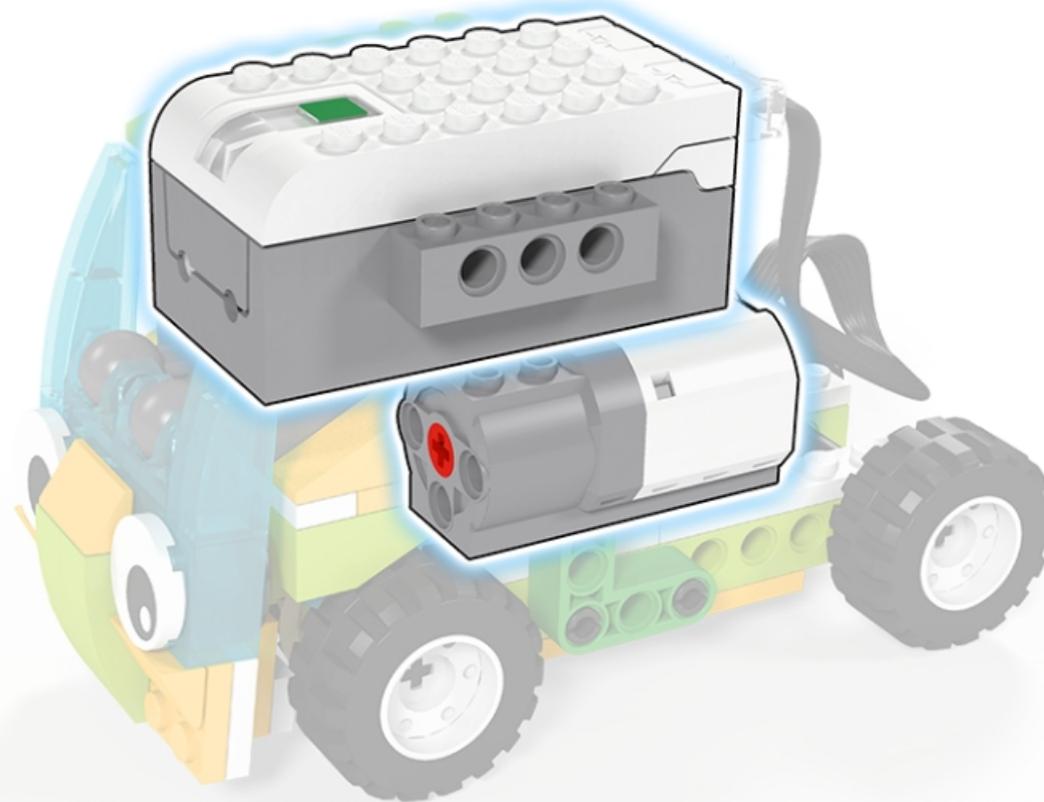

Features

Only the motor and the SmartHub is used in the Hero design. They are located one above other for achieve good balance between the load on the front and the rear axle.

Find:

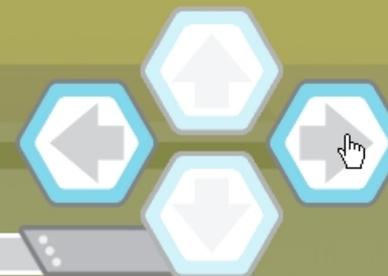

- ▶ smarthub
- ▶ motor

Task 3

Repeat the testing!

roboriseit.com

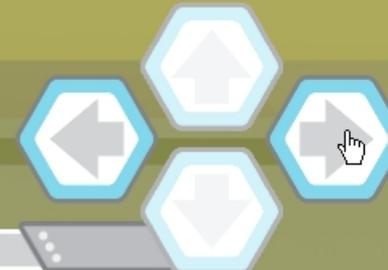

Task 4

Test your robot at the top of the ramp.

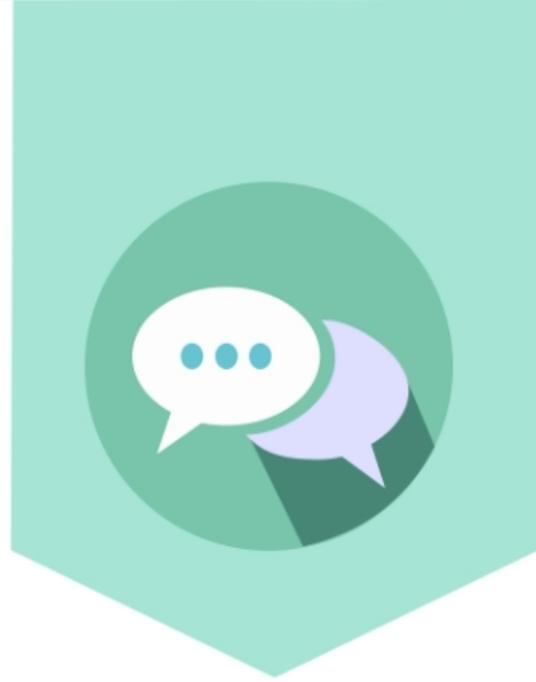

roboriseit.com

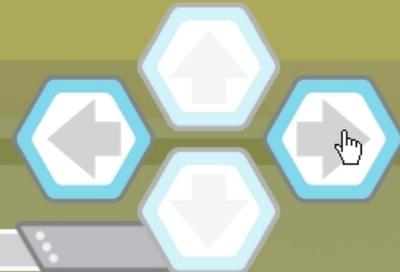

Discuss the result!

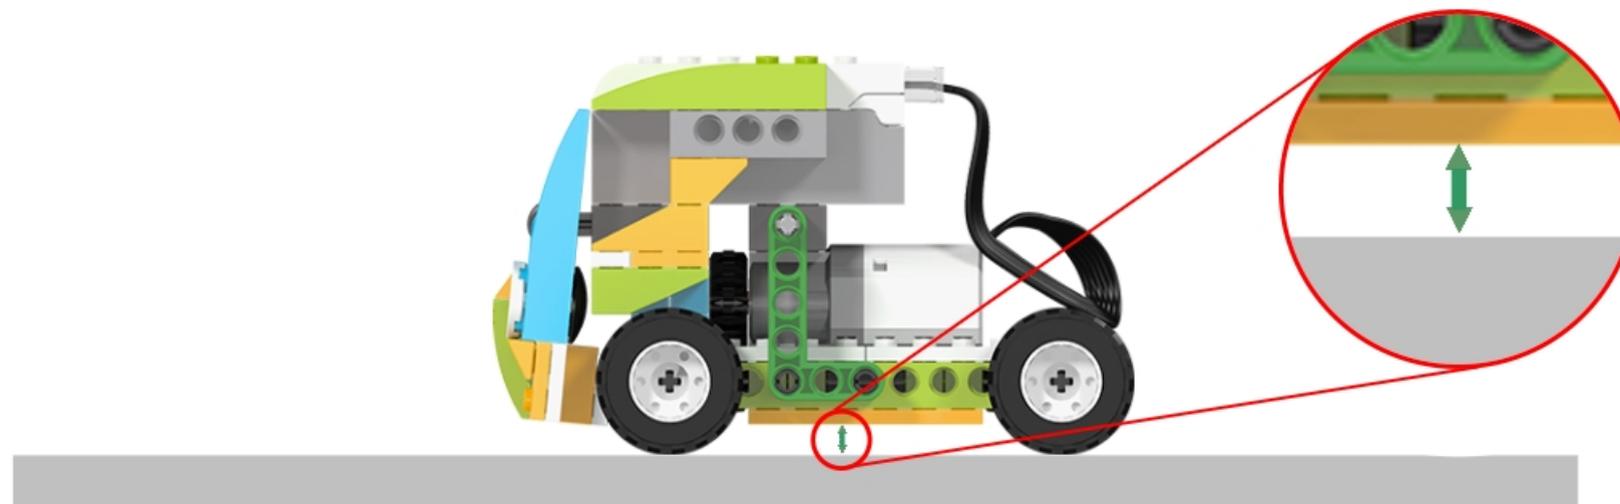

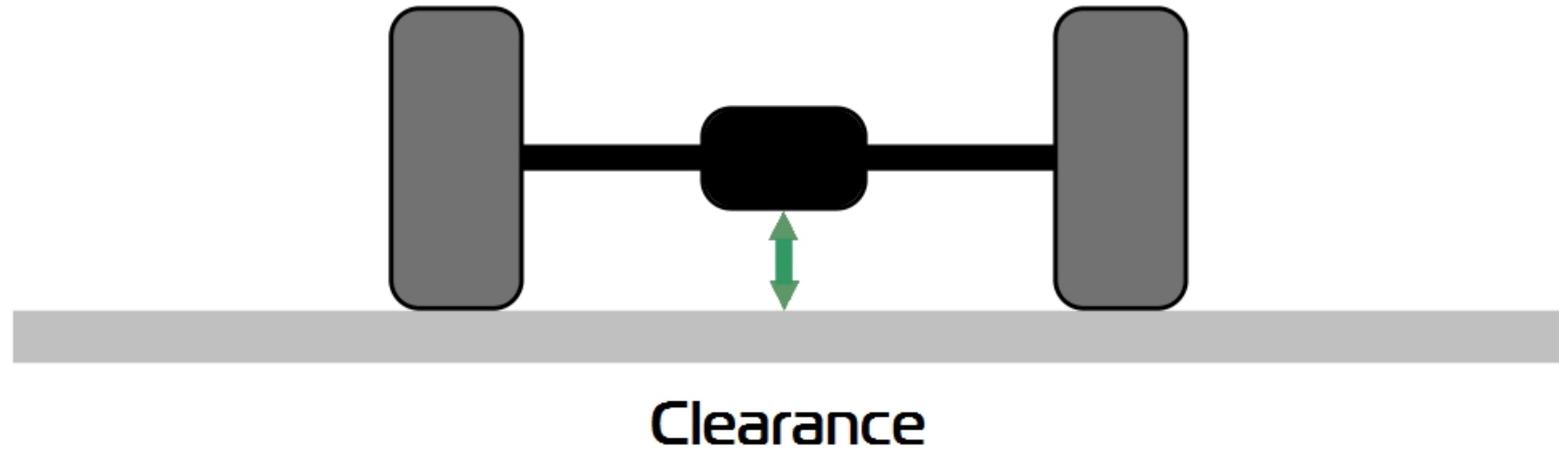

How to prevent sticking of the robot at the top of the ramp?

The Ground Clearance

The ground clearance is the distance from the ground to the car's bottom.

0

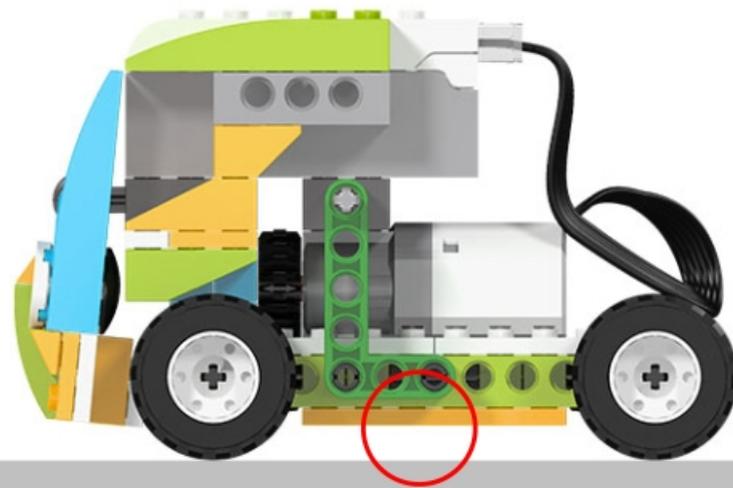

71

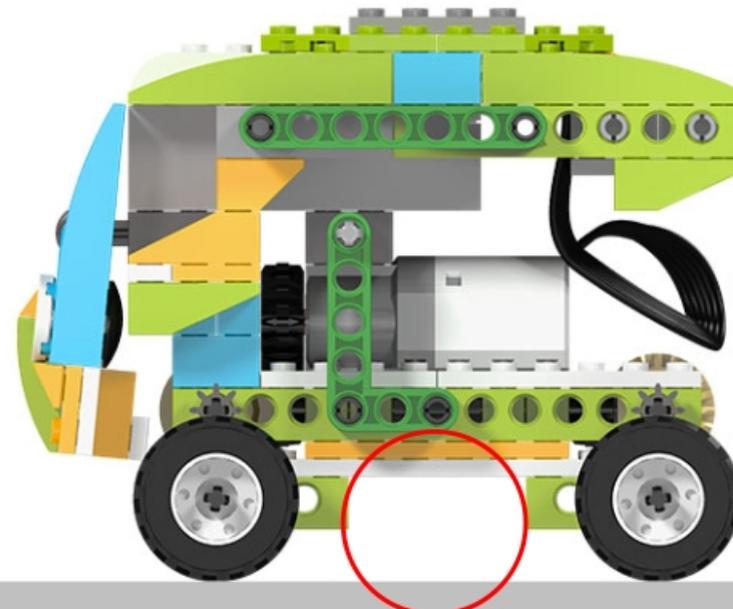

The Ground Clearance

The higher clearance is increased the passability of the car.

The clearance may be increased by using the bigger wheels or by using the portal axle.

Normal axle

Portal axle
